Abstract

This manual describes the inventory of linguistic relations used in the Copenhagen Dependency Treebanks, a set of parallel treebanks for Danish, English, German, Italian, and Spanish annotated with respect to syntax, morphology, discourse, coreference, and translational equivalence. The manual is generated automatically from the CDT project's online relation spreadsheet.¹

Chapter 1

Introduction

This manual describes the relations used in the Copenhagen Dependency Treebanks. The relations are ordered in a hierarchy, where each relation may have zero or more immediate super types, and zero or more immediate subtypes. The relations are presented in detail in the following chapters, grouped by linguistic level and general relation type. Every time a relation is introduced, its name is written in the left margin, with an indication of its immediate super types and the row in the online CDT spreadsheet in which the relation was defined. An example is shown below.

relation The notation in the left margin indicates that we now describe the relation **relation**;
isa super it has immediate super type **super** and is defined in row 12 in the spreadsheet. When
[12] describing a relation, we also lists its other properties, if relevant, including its:

- *long name*: we use short names in the annotation for brevity, but long names are sometimes more descriptive, so we provide these as an alias for the short relation name;
- *deprecated names*: when renaming relations, the old name is listed as a deprecated name for backwards compatibility, but it should be avoided in future annotation;
- *immediate subtypes*: the relation names that have been specified as the immediate subtypes of the relation;
- *related types*: lists the relations that are closely related to this relation, in some way or another, and which you might want to consult for clarification or additional information;
- *examples*: small annotated text examples that illustrate how the relation is used;

In PDF versions of this document, relation names are clickable so that you can navigate through the relation hierarchy by clicking on the relation names.

Top-level relations: ANY

ANY: directed relation
DIM: dimension
 DIM:LEVEL: dimension: linguistic level
 DIM:TYPE: dimension: relation type
 +: segment concatenation
 IDIOM: idiomatic relation
 PRIM: primary dependency relation
 ADJ: adjunct relation
 COMP: complement relation
 SEC: secondary dependency relation

Figure 2.1: The relations matching ANY-SYNTAX-MORPHOLOGY-DISCOURSE-ANAPHORA-SEMANTICS-ALIGNMENT-RULE.

ANY *Directed relation.* An arbitrary directed relation between two tokens. The arrow
[4] goes from parent (head, governor, nucleus) to child (dependent, satellite).

Subtypes: DIM RULE.

DIM *Dimension* (long: DIMENSION). A dimension in the hierarchy. Eg, linguistic level and
isa ANY relation type.

[5] Subtypes: DIM:LEVEL DIM:TYPE.

DIM:LEVEL *Dimension: linguistic level.* Dimension specifying the linguistic level of the relation.
isa DIM The classification of relations into linguistic levels is slightly arbitrary (there will be
[6] borderline cases where there is no single natural classification), and does not carry
any deep linguistic significance. It is more a question about linguistic convention
and research tradition than about any deep underlying difference between relations.

Subtypes: ALIGN ANA DISC MORPH SEM SYN.

DIM:TYPE *Dimension: relation type.* Dimension specifying the type of the relation.

isa DIM Subtypes: + IDIOM PRIM SEC.
[7]

+ *Segment concatenation* (long: CONCATENATION). A concatenation relation between
isa DIM:TYPE two adjacent segments. This relation is used if an indecomposable lexeme has mis-
[30]

takenly been segmented into two segments. Lexicalized complex expressions are instead marked as IDIOM relations with the "#" suffix.

Related types: IDIOM.

IDIOM *Idiomatic relation*. Idiomatic relation. Ie, relations between tokens in a complex lexicalized expression.
isa DIM:TYPE [31]
Subtypes: PRIM"#".

PRIM *Primary dependency relation* (long: PRIMARY). A primary dependency relation. Ie, a relation which specifies the primary head (the governor) of a token (the dependent).
isa DIM:TYPE [24]
Subtypes: ADJ COMP.

ADJ *Adjunct relation* (long: ADJUNCT). A primary adjunct relation. The relation is licensed by the adjunct, ie, the lexical entry of the adjunct specifies the permissible adjunct frames for the adjunct (ie, the permissible adjunct roles and the restrictions on the governor, eg, with respect to word class). In the compositional semantics, the adjunct acts as functor with the governor as argument.
isa PRIM [26]
Subtypes: DISCOTHER DISCPRAG DISCSEM SYNADJ.

COMP *Complement relation* (long: COMPLEMENT). A primary complement relation. The relation is licensed by the governor, ie, the lexical entry of the governor specifies the complement frames that it allows (the complement frame specifies the permissible complement roles, and the lexical restrictions on the complements, eg, with respect to word class). In the compositional semantics, the complements act as arguments with the governor as functor.
isa PRIM [25]
Subtypes: "@adverb SYNCOMP.

SEC *Secondary dependency relation* (long: SECONDARY). A secondary dependency relation. Eg, the secondary dependency relation in filler-gap constructions such as relatives without a relative pronoun (the relativized noun is a secondary dependent of the relative verb), raising and control constructions, and elliptic coordinations.
isa DIM:TYPE [27]
Subtypes: "["PRIM"]" "{"SEM"}".

GAP *Gapping dependent* (long: GAPPING). A relation between a gapping dependent in a secondary conjunct and the head of the first conjunct. In gapping coordinations, the secondary conjuncts have an elided head, so the remaining material in the secondary conjuncts is instead analyzed as gapping dependents of the head of the first conjunct. In the final CDT annotation, the annotation of gapping dependents will eventually be used to insert a phonetically empty head for the gapped conjuncts, and the gapping dependents will be attached to this gapped head.

 [112]

attr *Attributive* (deprecated **attrdatrr**). An attributive relation, typically between an adjective and a noun/determiner. In Germanic languages, adjectives are assumed to modify the determiner (because of the strong/weak congruence between determiner and adjective), or the noun if no determiner is present; in Romance languages, adjectives are assumed to modify the noun even if there is a determiner, and the determiner is only analyzed as the head if no noun is present (eg, in partitive constructions). The only exception to this rule is when the adjective and the noun form a compound, in which case the adjective is always analyzed as a "attr#" dependent of the lexical noun in both Germanic and Romance languages, even if a determiner is present.

pnct *Punctuation.*
 isa SYNADJ Confusion2: nobj_{50%} dobj_{50%} .
 [103]

rel *Relative clause.* A relation between a relative clause and a relativized NP/VP. The finite verb in the relative clause is analyzed as a "rel" dependent of the head of the relativized NP/VP (ie, the determiner if present, otherwise the noun). If there is a relative pronoun, it receives an incoming "ref" arrow from the head of the relativized NP/VP; otherwise, the head of the relativized NP/VP must function as a secondary dependent of some word within the relative clause (often the relative verb itself).

DEVA:pas.part *Verb-adjective derivation (passive)* (long: DEVERB:pas.part). Suffix creates passive ad-
 isa DEVA jectives.
 [323]

DEVN *Verb-noun derivation* (long: DEVERBN, deprecated PRED). Suffix creates deverbal nouns
 isa SUFFIX in a broad sense.
 [297] Subtypes: DEVN:agent DEVN:core DEVN:exper DEVN:inst DEVN:loc DEVN:other DEVN:recip
 DEVN:result.

DEVN:agent *Verb-noun derivation (agent)*. Suffix creates deverbal nouns absorbing the agent
 isa DEVN role.
 [298]

(agent derivation: singer = sing +er/PRED:agent)

DEVN:core *Verb-noun derivation (core)*. Suffix creates deverbal nouns expressing a nominalized
 isa DEVN version of the situation denoted by the original verb.
 [300]

(core derivation: exploitation = exploit@V +ation/PRED:core)

DEVN:exper *Verb-noun derivation (experiencer).* Suffix creates deverbal nouns absorbing the
isa DEVN experiencer role.
[299]

(experiencer derivation: admirer = admire +r/PRED:exper)

DEVN:inst *Verb-noun derivation (instrument).* Suffix creates deverbal nouns expressing the
isa DEVN instrument related to the meaning of the original noun.
[304]

(instrument derivation: exprimidor 'saftpresser' = exprimir +dor/PRED:inst)

DEVN:loc *Verb-noun derivation (location).* Suffix creates deverbal nouns expressing the loca-
isa DEVN tion related to the meaning of the original noun.
[303]

(locative derivation: comedor 'spisestue' = comer +dor/PRED:loc)

DEVN:other *Verb-noun derivation (other).* If in doubt about the meaning conveyed by the suffix
isa DEVN
[305]

DEVN:recip *Verb-noun derivation (recipient).* Suffix creates deverbal nouns absorbing the recip-
isa DEVN ient role
[302]

(recipient derivation: beneficiario 'den begunstigde' = beneficiar +ario/PRED:recip)

DEVN:result *Verb-noun derivation (patient).* Suffix creates deverbal nouns absorbing the patient
isa DEVN role.
[301]

(result derivation: hallazgo 'fund' = hallar +azgo/PRED:result)

DIMIN *Diminution.* Suffix conveys diminution.
isa SUFFIX
[291]

(diminutive: viejecito 'little old man' = viejo +ecito/DIM)

NOPRED *Noun-noun derivation.* Suffix creates non-predicative nouns (from other nouns) in
isa SUFFIX a broad sense.
[307]
Subtypes: NOPRED:agent NOPRED:capac NOPRED:cont NOPRED:loc NOPRED:other NO-
NOPRED:result NOPRED:script NOPRED:set NOPRED:temp.

NOPRED:agent *Noun-noun derivation (agent).* Suffix creates non-predicative nouns expressing an
isa NOPRED agent role.
[308]

(agent derivation: miller = mill +er/NOPRED:agent)

NOPRED:capac *Noun-noun derivation (capacity).* Suffix creates non-predicative nouns expressing a capacity.
isa NOPRED
[313]

(capacity derivation: cestada 'kurvfuld' = cesta +ada/NOPRED:capac)

NOPRED:cont *Noun-noun derivation (container).* Suffix creates non-predicative nouns expressing a container.
isa NOPRED
[310]

(container derivation: azucarero 'sugar bowl' = azucar +ero/NOPRED:cont)

NOPRED:loc *Noun-noun derivation (location).* Suffix creates non-predicative nouns expressing a location.
isa NOPRED
[314]

(locative derivation: arenal 'sandet strækning' = arena +al/NOPRED:loc)

NOPRED:other *Noun-noun derivation (other).* If in doubt about the meaning conveyed by the suffix
isa NOPRED
[316]

NOPRED:result *Noun-noun derivation (result).* Suffix creates non-predicative nouns expressing a result.
isa NOPRED
[309]

(result derivation: puñalada 'knivstik' = puñal +ada/NOPRED:result)

NOPRED:script *Noun-noun derivation (script).* Suffix creates non-predicative nouns expressing a script/notion related to the original noun.
isa NOPRED
[315]

(script derivation: pontaje 'brobetaling' = puente +aje/NOPRED:script)

NOPRED:set *Noun-noun derivation (set).* Suffix creates non-predicative nouns expressing a set.
isa NOPRED
[312]

(set derivation: perrada 'hundekobbel' = perro +ada/NOPRED:set)

NOPRED:temp *Noun-noun derivation (temporal).* Suffix creates non-predicative nouns expressing a temporal aspect.
isa NOPRED
[311]

(temporal derivation: temporada 'tidsrum/sæson' = tiempo +ada/NOPRED:temp)

PEJ *Pejoration.* Suffix conveys a pejorative sense.
isa SUFFIX
[292]

(pejorative: vinacho 'bad vine' = vino +acho/PEJ)

QUAL *Adjective derivation.* Suffix creates deadjectival nouns.
isa SUFFIX

Anaphor relations: ANAPHORA

ANA: anaphoric level
anaphor:

Figure 6.1: The relations matching ANAPHORA-coref-assoc.

ANA *Anaphoric level* (long: ANAPHORA). An anaphoric relation. Ie, a relation between an anaphor (pronoun, definite description, etc.) and an antecedent which either is a coreferent, or which provides access to a coreferent via its qualia structure. The relation goes from antecedent to anaphor.

Subtypes: anaphor.

anaphor . This section concerns anaphors as well as cataphors; cataphors may by and large express the same relations with their postcedents as anaphors with their antecedents; the relations are therefore labelled identically and will be distinguished solely by the edge direction: from left to right (anaphors) or from right to left (cataphors); because of their much higher frequency, we shall limit ourselves to examples of anaphors

Subtypes: assoc coref.

6.1 Coreference relations: coref

coref: coreference
coref-iden: coreferential NP with lexical identity
coref-part: partial coreference
coref-res: resumptive anaphor
coref-res.prg: pragmatic coreference
coref-var: coreferential NP with lexical variety
ref: syntactically determined coreference

Figure 6.2: The relations matching coref.

coref isa anaphor [188]	<i>Coreference</i> . Anaphor denotes same entity as antecedent; all coreferential pronouns are labelled this way Subtypes: coref-iden coref-part coref-res coref-var ref.
coref-iden isa coref [190]	<i>Coreferential NP with lexical identity</i> (deprecated coref-id). A car -> the car // a yellow car -> the yellow car
coref-part isa coref [194]	<i>Partial coreference</i> . Coreferential with a part of the antecedent, ex. a bunch of flowers -> the roses, a couple -> the man; the Italian partitive "ne", ex. some wine -> ne vuoi (un po')?
coref-res isa coref [192]	<i>Resumptive anaphor</i> (deprecated nowincludescoref-res.cause). Subtypes: coref-res.prg.
coref-res.prg isa coref-res [193]	<i>Pragmatic coreference</i> . Takes up a statement and evaluates it with respect to speech act; I will be there tomorrow -> the threat / promise / warning / statement
coref-var isa coref [191]	<i>Coreferential NP with lexical variety</i> . A car -> the vehicle // a yellow car -> the car
ref isa coref [189]	<i>Syntactically determined coreference</i> . Syntactically determined coreference (eg, relative pronouns, external topics)

7.2 Thematic role relations: SEMROLE

SEMROLE . A semantic relation. All the relations of the semantic roles run under the text line.
 isa SEM The syntactic relation that runs over the text line is determined by the word class
 [46] of the lemma in question. In NP constructions, the syntactic head of an adjunct is assumed to also act as the semantic head of the adjunct, ie, the semantic relation mirrors the syntactic relation in this respect.

Agreement and confusion tables

In the following tables, the columns are interpreted as follows:

- *Relation name R*: the name of the relation.
- *Agreement A*: the estimated level of agreement, defined as the probability that another annotator assigns the same label to the relation (this number may be inaccurate if N is small).
- *Relation count N*: the number of distinct tokens in the corpus that were annotated with the relation.
- *Confusion table*: the relations that other annotators used, with a percentage that indicates the probability that each relation was used by the other annotator instead of R .
