## **Abstract**

This manual describes the inventory of linguistic relations used in the Copenhagen Dependency Treebanks, a set of parallel treebanks for Danish, English, German, Italian, and Spanish annotated with respect to syntax, morphology, discourse, coreference, and translational equivalence. The manual is generated automatically from the CDT project's online relation spreadsheet.<sup>1</sup>

# Chapter 1

## Introduction

This manual describes the relations used in the Copenhagen Dependency Treebanks. The relations are ordered in a hierarchy, where each relation may have zero or more immediate super types, and zero or more immediate subtypes. The relations are presented in detail in the following chapters, grouped by linguistic level and general relation type. Every time a relation is introduced, its name is written in the left margin, with an indication of its immediate super types and the row in the online CDT spreadsheet in which the relation was defined. An example is shown below.

**relation** The notation in the left margin indicates that we now describe the relation `relation`; it has  
isa super immediate super type `super` and is defined in row 12 in the spreadsheet. When describing a  
[12] relation, we also lists its other properties, if relevant, including its:

- *long name*: we use short names in the annotation for brevity, but long names are sometimes more descriptive, so we provide these as an alias for the short relation name;
- *deprecated names*: when renaming relations, the old name is listed as a deprecated name for backwards compatibility, but it should be avoided in future annotation;
- *immediate subtypes*: the relation names that have been specified as the immediate subtypes of the relation;
- *related types*: lists the relations that are closely related to this relation, in some way or another, and which you might want to consult for clarification or additional information;
- *examples*: small annotated text examples that illustrate how the relation is used;

In PDF versions of this document, relation names are clickable so that you can navigate through the relation hierarchy by clicking on the relation names.

      ADJ: adjunct relation  
      COMP: complement relation  
    SEC: secondary dependency relation  
    fill: licensed filler

Figure 2.1: The relations matching ANY-SYNTAX-MORPHOLOGY-DISOURSE-ANAPHORA-SEMANTICS-ALIGNMENT-RULE.

**ANY** *Directed relation*. An arbitrary directed relation between two tokens. The arrow goes from  
[4] parent (head, governor, nucleus) to child (dependent, satellite).

Subtypes: DIM RULE.

**DIM** *Dimension* (long: DIMENSION). A dimension in the hierarchy. Eg, linguistic level and relation  
isa ANY type.

[5] Subtypes: DIM:LEVEL DIM:TYPE.

**DIM:LEVEL** *Dimension: linguistic level*. Dimension specifying the linguistic level of the relation. The  
isa DIM classification of relations into linguistic levels is slightly arbitrary (there will be borderline  
[6] cases where there is no single natural classification), and does not carry any deep linguistic  
significance. It is more a question about linguistic convention and research tradition than  
about any deep underlying difference between relations.

Subtypes: ALIGN ANA DISC MORPH SEM SYN.

**DIM:TYPE** *Dimension: relation type*. Dimension specifying the type of the relation.

isa DIM Subtypes: + IDIOM PRIM SEC fill.  
[7]

+ *Segment concatenation* (long: CONCATENATION). A concatenation relation between two ad-  
isa DIM:TYPE jacent segments. This relation is used if an indecomposable lexeme has mistakenly been seg-  
[31]

mented into two segments. Lexicalized complex expressions are instead marked as IDIOM relations with the ”#” suffix.

Related types: IDIOM.

Pica ss o

**IDIOM** *Idiomatic relation*. An idiomatic relation. Ie, a relation between tokens in a complex lexicalized expression that form a single lexical unit.

[32] Subtypes: PRIM”#”.

**PRIM** *Primary dependency relation* (long: PRIMARY). A primary dependency relation. Ie, a relation which specifies the primary head (the governor) of a token (the dependent).

[24] Subtypes: ADJ COMP.

**ADJ** *Adjunct relation* (long: ADJUNCT). A primary adjunct relation. The relation is licensed by the adjunct, ie, the lexical entry of the adjunct specifies the permissible adjunct frames for the adjunct (ie, the permissible adjunct roles and the restrictions on the governor, eg, with respect to word class). In the compositional semantics, the adjunct acts as functor with the governor as argument.

Subtypes: DISCOTHER DISCPRAG DISCSEM SYNADJ.

**COMP** *Complement relation* (long: COMPLEMENT). A primary complement relation. The relation is licensed by the governor, ie, the lexical entry of the governor specifies the complement frames that it allows (the complement frame specifies the permissible complement roles, and the lexical restrictions on the complements, eg, with respect to word class). In the compositional semantics, the complements act as arguments with the governor as functor.

Subtypes: ”@”adverb SYNCOMP.

**SEC** *Secondary dependency relation* (long: SECONDARY). A secondary dependency relation. Eg, the secondary dependency relation in filler-gap constructions such as relatives without a relative pronoun (the relativized noun is a secondary dependent of the relative verb), raising and control constructions, and elliptic coordinations.

Subtypes: ”[”PRIM”]” ”[”SEM”]”.

**fill** *Licensed filler*. A relation from a filler licenser to a phonetically empty filler that it licenses. Filler relations are never annotated explicitly in the CDT annotation, but play an important role in the underlying linguistic theory, Discontinuous Grammar. In DG, a ”filler” is a phonetically empty constituent which is licensed lexically by a ”filler licenser” lexeme (eg, the relative verb in a relative construction acts as filler licenser for a filler that essentially provides a copy of the relativized noun, and in control constructions, the controlling verb passes on a copy of the controlled complement to the subordinate verb).

# Syntactic relations: SYNTAX

SYN: syntax level

### 3.1 Complement relations: SYNCOMP

**SYNCOMP** *Syntactic complement*. A syntactic complement role. Complements are lexically licensed by their governors. In the functor-argument structure, they act as functors with the complements as arguments.

 Confusion<sub>1</sub>: pnc<sub>100%</sub> .

**fobj** *Filler object*. Filler objects are never annotated explicitly in the CDT annotation. In Discontinuous Grammar, a "filler" is a phonetically empty constituent which is licensed lexically by a "filler licenser" lexeme (eg, the relative verb in a relative construction acts as filler licenser for a filler that essentially provides a copy of the relativized noun). A "filler object" is reserved for the special case where a particular word (eg, a relative pronoun) must consume a filler (eg, the filler created by the relative verb). That is, most of the constructions which include a "ref" relation in the CDT involve the use of a filler object in the detailed theoretical account in Discontinuous Grammar.  
 Related types: fill ref.

**gobj** *Genitive object*. If the genitive object is part of a NP which nucleus is deverbal, the following annotation possibilities are available: gobj.subj{SEMROLE} gobj.dobj{SEMROLE} gobj.pobj{SEMROLE} gobj.iobj{SEMROLE} The relevant semantic roles in this context are agent, patient, recipient, experient, location.

Confusion<sub>1</sub>: pnct<sub>100%</sub> .

**numa** *Additive numeral complement.* An additive numeral complement relation. Numerals license one additive and one numeral complement, both optional. The numerical value associated with the expression is the value  $M * N + A$ , where M is the numerical value of the multiplicative complement, A is the numerical value of the additive complement, and N is the numerical value associated with the lexical numeral itself. Eg, "two hundred four" has value " $2 * 100 + 4$ ", "two hundred four thousand" has value " $(2 * 100 + 4) * 1000$ ", and "two hundred four thousand and twenty three" has value " $(2 * 100 + 4) * 1000 + (20 + (3))$ ".  
Related types: numm.  
[91]

**numm** *Multiplicative numeral complement.* An multiplicative numeral complement relation. Numerals license one additive and one numeral complement, both optional. The numerical value associated with the expression is the value  $M * N + A$ , where M is the numerical value of the multiplicative complement, A is the numerical value of the additive complement, and N is the numerical value associated with the lexical numeral itself. Eg, "two hundred four" has value " $2 * 100 + 4$ ", "two hundred four thousand" has value " $(2 * 100 + 4) * 1000$ ", and "two hundred four thousand and twenty three" has value " $(2 * 100 + 4) * 1000 + (20 + (3))$ ".  
 Related types: numa.

**part** *Verbal particle.* Verbal particle.  
 Related types: avobj.

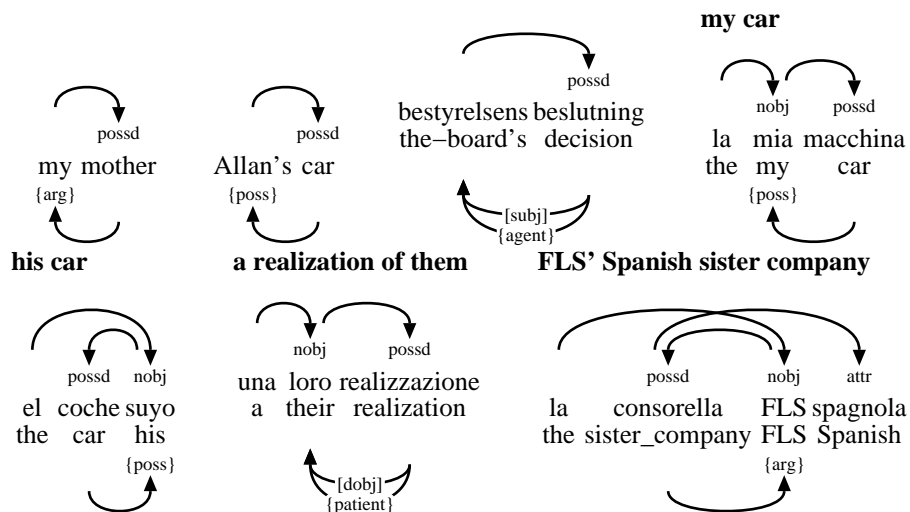

**pobj** *Prepositional object.* A prepositional object relation. The governor may be a verb, noun, adjective, adverbial, or another preposition. The preposition is analyzed as the head of the prepositional object itself. If the prepositional object is part of a deverbal NP (ie, an NP where the nucleus is derived from a verb), the CDT annotation specifies the underlying role of the NP within the PP by adding a "." followed by the underlying role to the relation, e.g., "pobj.subj" (the NP in the PP would act as subject in the underlying V), "pobj.dobj", "pobj.pobj", and "pobj.iobj"; in these cases, the semantic role "{SEMROLE}" must be annotated as well (the most relevant semantic roles in this context are "agent", "patient", "recipient", "experient", "location").  
 Related types: SEMROLE avobj.

**possd** *Possessed complement.* The possessed complement in a possessive construction. Possession is understood in a syntactic sense as any construction with a clitic genitive marker, not necessarily as possession in a narrow semantic sense. A better name may be chosen for this relation in the future.

Related types: "{\$PRIM}" SEMROLE possr.

**possr** *Possessor complement.* NO LONGER IN USE  
 isa SYNCOMP The possessor complement in a possessive construction. Possession is understood in a syntactic sense as any construction with a clitic genitive marker, not necessarily as possession in a narrow semantic sense. A better name may be chosen for this relation in the future.

**robj** *Reflexive object.*  
isa SYNCOMP Related types: dobj.

**He decided to walk.**

**subj** *Subject.* A subject relation. In languages with case, subjects are usually nominative-marked. Agent-roles are often encoded as subjects, but not necessarily so (eg, in passive constructions).  
[75]

Subtypes: expl.  
Related types: expl.

**expl** *Expletive subject*. An expletive subject relation. The expletive subject is typically a situational place adverbial like "there" or time adverbial like "now", and is only possible for verbs that support the expletive alternation. The expletive alternation applies to all verbs that do not have a direct object (this observation, due to Richard Hudson, can be used as a test to distinguish between direct and indirect objects in verbs that take a single object). The alternation creates a new lexicalization of the verb by demoting the original subject to the vacant direct object role (with the restriction that only indefinites are allowed in this direct object role), and letting the subject role be filled by a situational place or time adverbial.

**GAP** *Gapping dependent* (long: GAPPING). A relation between a gapping dependent in a secondary conjunct and the head of the first conjunct. In gapping coordinations, the secondary conjuncts have an elided head, so the remaining material in the secondary conjuncts is instead analyzed as gapping dependents of the head of the first conjunct. In the final CDT annotation, the annotation of gapping dependents will eventually be used to insert a phonetically empty head for the gapped conjuncts, and the gapping dependents will be attached to this gapped head.

**attr** *Attributive* (deprecated attrdatrr). An attributive relation, typically between an adjective and a noun/determiner. In Germanic languages, adjectives are assumed to modify the determiner (because of the strong/weak congruence between determiner and adjective), or the noun if no determiner is present; in Romance languages, adjectives are assumed to modify the noun even if there is a determiner, and the determiner is only analyzed as the head if no noun is present (eg, in partitive constructions). The only exception to this rule is when the adjective and the noun form a compound, in which case the adjective is always analyzed as a "attr#" dependent of the lexical noun in both Germanic and Romance languages, even if a determiner is present.

isa DENOM  
[334]

"que posee/tiene/lleva N" (barbudo – "que lleva barba" 'skægget/som bærer skæg')

**DENOM:rel** *Noun-adjective derivation (relational).* Suffix creates denominal adjectives with a relational meaning.  
isa DENOM  
[328] Subtypes: DENOM:rel.deono DENOM:rel.norm.

**DENOM:rel.deono** *Noun-adjective derivation (naming).* Suffix creates relational adjectives with the meaning of "naming".  
isa DENOM:rel  
[330] Subtypes: DENOM:rel.deono.pers DENOM:rel.deono.place.

**DENOM:rel.deono.pers** *Noun-adjective derivation (naming persons).* Suffix creates relational adjectives with the meaning of "naming" persons.  
isa DENOM:rel.deono  
[331]

Cervantino 'som har at gøre med Cervantes'

**DENOM:rel.deono.place** *Noun-adjective derivation (naming places).* Suffix creates relational adjectives with the meaning of "naming" of places.  
isa DENOM:rel.deono  
[332]

Madrileño 'som har at gøre med/kommer fra Madrid'

**DENOM:rel.norm** *Noun-adjective derivation (normal).* Suffix creates relational adjectives with a "normal" meaning aspect.  
isa DENOM:rel  
[329]

(denominal adjective: presidential = president +ial/DENOM:rel.norm)

**DENOM:resem** *Noun-adjective derivation (resemblance).* Suffix creates denominal adjectives that express resemblance.  
isa DENOM  
[333]

"que se parece a N" (sanchopancesco – "que se parece a Sancho Panza" 'sanchopanzask/som ligner Sancho Panza')

- DENUM** *Adjective-numeral derivation.* Suffix creates denumeral adjectives in a broad sense.  
 isa SUFFIX Subtypes: DENUM:mult DENUM:ord DENUM:part.  
 [338]
- DENUM:mult** *Adjective-multiplicative derivation.* Suffix creates multiplicative numerals.  
 isa DENUM  
 [341]  
 "kardinal=cinco – multiplikativ=quíntuplo" 'fem/femdobbelte'
- DENUM:ord** *Adjective-ordinal derivation.* Suffix creates ordinals.  
 isa DENUM  
 [339]  
 "kardinal=dos – ordinal=segundo" 'to/anden'
- DENUM:part** *Adjective-partitive derivation.* Suffix creates partitive numerals.  
 isa DENUM  
 [340]  
 "kardinal=doce – partitiv=doceavo" 'tolv/tolvtedel'
- DER** *Verb derivation.* Suffix triggers a derivation  
 isa SUFFIX Subtypes: DER:av DER:nv DER:vv.  
 [294]
- DER:av** *Adjective-verb derivation.* Suffix triggers a derivation from an adjective to a verb.  
 isa DER  
 [296]  
 (adjective->verb derivation: darken = dark +en/DER:av)
- DER:nv** *Noun-verb derivation.* Suffix triggers a derivation from a noun to a verb.  
 isa DER  
 [295]  
 (noun->verb derivation: salar 'to salt' = sal +ar/DER:nv)
- DER:vv** *Verb-verb derivation.* Suffix triggers a derivation from a verb to another verb.  
 isa DER  
 [297]  
 (verb->verb derivation: adormecer 'lull to sleep' = dormir +[a][ecer]/DER:vv)
- DEV** (long: DEVERB).  
 isa SUFFIX Subtypes: DEVA.  
 [318]
- DEVA** *Verb-adjective derivation* (long: DEVERBA). Suffix creates deverbal adjectives in a broad sense.  
 isa DEV  
 [319]  
 Subtypes: DEVA:act DEVA:pas.part.
- DEVA:act** *Verb-adjective derivation (active)* (long: DEVERB:act.pure). Suffix creates active adjectives.  
 isa DEVA  
 [320]  
 Subtypes: DEVA:act.disp DEVA:act.poten DEVA:pas.
- DEVA:act.disp** *Verb-adjective derivation (pure)* (long: DEVERB:act.disp). Suffix creates active adjectives with the meaning aspect "pure".  
 isa DEVA:act  
 [321]

**DEVN:core** *Verb-noun derivation (core)*. Suffix creates deverbal nouns expressing a nominalized version of the situation denoted by the original verb.  
isa DEVN  
[301] (core derivation: exploitation = exploit@V +ation/PRED:core)

**DEVN:exper** *Verb-noun derivation (experiencer)*. Suffix creates deverbal nouns absorbing the experiencer role.  
isa DEVN  
[300] (experiencer derivation: admirer = admire +r/PRED:exper)

**DEVN:inst** *Verb-noun derivation (instrument)*. Suffix creates deverbal nouns expressing the instrument related to the meaning of the original noun.  
isa DEVN  
[305] (instrument derivation: exprimidor 'saftpresser' = exprimir +dor/PRED:inst)

**DEVN:loc** *Verb-noun derivation (location)*. Suffix creates deverbal nouns expressing the location related to the meaning of the original noun.  
isa DEVN  
[304] (locative derivation: comedor 'spisestue' = comer +dor/PRED:loc)

**DEVN:other** *Verb-noun derivation (other)*. If in doubt about the meaning conveyed by the suffix  
isa DEVN

**DEVN:recip** *Verb-noun derivation (recipient)*. Suffix creates deverbal nouns absorbing the recipient role  
isa DEVN  
[303] (recipient derivation: beneficiario 'den begunstigede' = beneficiar +ario/PRED:recip)

**DEVN:result** *Verb-noun derivation (patient)*. Suffix creates deverbal nouns absorbing the patient role.  
isa DEVN  
[302] (result derivation: hallazgo 'fund' = hallar +azgo/PRED:result)

**DIMIN** *Diminution*. Suffix conveys diminution.  
isa SUFFIX  
[292]

(diminutive: viejecito 'little old man' = viejo +ecito/DIM)

**NOPRED** *Noun-noun derivation.* Suffix creates non-predicative nouns (from other nouns) in a broad sense.

[308] Subtypes: NOPRED:agent NOPRED:capac NOPRED:cont NOPRED:loc NOPRED:other NOPRED:result NOPRED:script  
NOPRED:set NOPRED:temp.

**NOPRED:agent** *Noun-noun derivation (agent).* Suffix creates non-predicative nouns expressing an agent role.  
isa NOPRED  
[309]

(agent derivation: miller = mill +er/NOPRED:agent)

**NOPRED:capac** *Noun-noun derivation (capacity).* Suffix creates non-predicative nouns expressing a capacity.  
isa NOPRED  
[314]

(capacity derivation: cestada 'kurvfuld' = cesta +ada/NOPRED:capac)

**NOPRED:cont** *Noun-noun derivation (container).* Suffix creates non-predicative nouns expressing a container.  
isa NOPRED  
[311]

(container derivation: azucarero 'sugar bowl' = azucar +ero/NOPRED:cont)

**NOPRED:loc** *Noun-noun derivation (location).* Suffix creates non-predicative nouns expressing a location.  
isa NOPRED  
[315]

(locative derivation: arenal 'sandet strækning' = arena +al/NOPRED:loc)

**NOPRED:other** *Noun-noun derivation (other).* If in doubt about the meaning conveyed by the suffix  
isa NOPRED

**NOPRED:result** *Noun-noun derivation (result).* Suffix creates non-predicative nouns expressing a result.  
isa NOPRED  
[310]

(result derivation: puñalada 'knivstik' = puñal +ada/NOPRED:result)

**NOPRED:script** *Noun-noun derivation (script).* Suffix creates non-predicative nouns expressing a script/notion related to the original noun.  
isa NOPRED  
[316]

(script derivation: pontaje 'brobetaling' = puente +aje/NOPRED:script)

**NOPRED:set** *Noun-noun derivation (set).* Suffix creates non-predicative nouns expressing a set.  
isa NOPRED  
[313]

(set derivation: perrada 'hundekobbel' = perro +ada/NOPRED:set)

**NOPRED:temp** *Noun-noun derivation (temporal).* Suffix creates non-predicative nouns expressing a temporal aspect.  
isa NOPRED  
[312]

(temporal derivation: temporada 'tidsrum/sæson' = tiempo +ada/NOPRED:temp)

**PEJ** *Pejoration.* Suffix conveys a pejorative sense.  
isa SUFFIX  
[293]

(pejorative: vinacho 'bad vine' = vino +acho/PEJ)

**QUAL** *Adjective derivation.* Suffix creates deadjectival nouns.  
isa SUFFIX

## 5.1 Functional relations: DISCFUNC

**DISCPRAG** *Pragmatic and illocutionary discourse relations* (deprecated DISCFUNC). The dependent text segment expresses a change in speech act or pragmatic function (speaker's intention) wrt the governing segment; the label indicates the speech act or function of the dependent segment; regarding speaker's intentions and speech acts we consider the narrating asserting speech act as our default value.

[207]

Subtypes: ANSW CONSOL DIREC EXPR INTACT QUEST.

**ANSW** *Answer*. Governing text segment contains question or problem, dependent text segment answer or solution

## 5.2 Semantic relations: DISCSEM

**DISCSEM** *Semantic discourse relations.* The relations hold between the propositions of the governing

isa ADJ DISC and dependent text segments and are defined in semantic terms; relations are mono- or multi-  
[206] nuclear; the four “prg”-subtypes express changes of speech act like the DISCPRAG, however the semantic relations are so dominant that they should determine the main type of the relation

Subtypes: AGENTIVE CONC COND CONJ CONTR DISJ FORMAL TELIC TIME.

**AGENTIVE** *Cause relation (discourse).* S expresses “bringing about” or cause in a broad sense

isa DISCSEM Subtypes: AGENTIVE:expl AGENTIVE:reas AGENTIVE:subj.

# Anaphor relations: ANAPHORA

ANA: anaphoric level  
anaphor:

Figure 6.1: The relations matching ANAPHORA-coref-assoc.

**ANA** *Anaphoric level* (long: ANAPHORA). An anaphoric relation. Ie, a relation between an anaphor (pronoun, definite description, etc.) and an antecedent which either is a coreferent, or which provides access to a coreferent via its qualia structure. The relation goes from antecedent to anaphor.

Subtypes: anaphor.

**anaphor** . This section concerns anaphors as well as cataphors; cataphors may by and large express the same relations with their postcedents as anaphors with their antecedents; the relations are therefore labelled identically and will be distinguished solely by the edge direction: from left to right (anaphors) or from right to left (cataphors); because of their much higher frequency, we shall limit ourselves to examples of anaphors

Subtypes: assoc coref.

## 6.1 Coreference relations: coref

coref: coreference  
coref-iden: coreferential NP with lexical identity  
coref-res: resumptive anaphor  
    coref-res.prg: pragmatic coreference  
coref-var: coreferential NP with lexical variety  
ref: syntactically determined coreference

Figure 6.2: The relations matching coref.

**assoc-formal** *Associative anaphor (formal)*. Anaphor is associated with antecedent wrt its formal qualia (shape, dimension, colour, etc.)  
isa assoc [200] Subtypes: assoc-formal.loc.

a car → the size, the colour; a building → the height

**assoc-formal.loc** *Associative locative anaphor*. The anaphor is located in the antecedent  
isa assoc-formal [201]

a village → the church, the inn, the train station

**assoc-telic** *Associative anaphor (telic)* (deprecated assoc-scope?). Anaphor is associated with antecedent wrt its telic qualia (purpose, function, etc.)

## 7.2 Thematic role relations: SEMROLE

**SEMROLE** . A semantic relation. All the relations of the semantic roles run under the text line. The syntactic relation that runs over the text line is determined by the word class of the lemma in question. In NP constructions, the syntactic head of an adjunct is assumed to also act as the semantic head of the adjunct, ie, the semantic relation mirrors the syntactic relation in this respect.

# Agreement and confusion tables

In the following tables, the columns are interpreted as follows:

- *Relation name R*: the name of the relation.
- *Agreement A*: the estimated level of agreement, defined as the probability that another annotator assigns the same label to the relation (this number may be inaccurate if  $N$  is small).
- *Relation count N*: the number of distinct multiply annotated tokens in the corpus that were annotated with the relation by at least one annotator.
- *Confusion table*: the relations that other annotators used, with a percentage that indicates the probability that each relation was used by the other annotator instead of  $R$ .
