## Abstract

This manual describes the inventory of linguistic relations used in the Copenhagen Dependency Treebanks, a set of parallel treebanks for Danish, English, German, Italian, and Spanish annotated with respect to syntax, morphology, discourse, coreference, and translational equivalence. The manual is generated automatically from the CDT project's online relation spreadsheet.<sup>1</sup>

# Chapter 1

## Introduction

This manual describes the relations used in the Copenhagen Dependency Treebanks. The relations are ordered in a hierarchy, where each relation may have zero or more immediate super types, and zero or more immediate subtypes. The relations are presented in detail in the following chapters, grouped by linguistic level and general relation type. Every time a relation is introduced, its name is written in the left margin, with an indication of its immediate super types and the row in the online CDT spreadsheet in which the relation was defined. An example is shown below.

**relation** The notation in the left margin indicates that we now describe the relation **relation**;  
isa **super** it has immediate super type **super** and is defined in row 12 in the spreadsheet. When  
[12] describing a relation, we also lists its other properties, if relevant, including its:

- *long name*: we use short names in the annotation for brevity, but long names are sometimes more descriptive, so we provide these as an alias for the short relation name;
- *deprecated names*: when renaming relations, the old name is listed as a deprecated name for backwards compatibility, but it should be avoided in future annotation;
- *immediate subtypes*: the relation names that have been specified as the immediate subtypes of the relation;
- *related types*: lists the relations that are closely related to this relation, in some way or another, and which you might want to consult for clarification or additional information;
- *examples*: small annotated text examples that illustrate how the relation is used;

In PDF versions of this document, relation names are clickable so that you can navigate through the relation hierarchy by clicking on the relation names.

# Top-level relations: ANY

ANY: directed relation  
DIM: dimension  
  DIM:LEVEL: dimension: linguistic level  
  DIM:TYPE: dimension: relation type  
    +: segment concatenation  
  IDIOM: idiomatic relation  
  PRIM: primary dependency relation  
    ADJ: adjunct relation  
    COMP: complement relation  
  SEC: secondary dependency relation

Figure 2.1: The relations matching ANY-SYNTAX-MORPHOLOGY-DISCOURSE-ANAPHORA-SEMANTICS-ALIGNMENT-RULE.

**ANY** *Directed relation.* An arbitrary directed relation between two tokens. The arrow  
[4] goes from parent (head, governor, nucleus) to child (dependent, satellite).  
Subtypes: DIM RULE.

**DIM** *Dimension* (long: DIMENSION). A dimension in the hierarchy. Eg, linguistic level and  
isa ANY relation type.  
[5] Subtypes: DIM:LEVEL DIM:TYPE.

**DIM:LEVEL** *Dimension: linguistic level.* Dimension specifying the linguistic level of the relation.  
isa DIM The classification of relations into linguistic levels is slightly arbitrary (there will be  
[6] borderline cases where there is no single natural classification), and does not carry  
any deep linguistic significance. It is more a question about linguistic convention and  
research tradition than about any deep underlying difference between relations.  
Subtypes: ALIGN ANA DISC MORPH SEM SYN.

**DIM:TYPE** *Dimension: relation type.* Dimension specifying the type of the relation.  
isa DIM Subtypes: + IDIOM PRIM SEC.

[7] **+** *Segment concatenation* (long: CONCATENATION). A concatenation relation between  
isa DIM:TYPE two adjacent segments. This relation is used if an indecomposable lexeme has mis-  
[30] takenly been segmented into two segment. Lexicalized complex expressions are  
instead marked as IDIOM relations with the "#" suffix.

- IDIOM** *Idiomatic relation*. Idiomatic relation. Ie, relations between tokens in a complex lexicalized expression.  
 isa DIM:TYPE [31] Subtypes: PRIM "#".
- PRIM** *Primary dependency relation* (long: PRIMARY). A primary dependency relation. Ie, a relation which specifies the primary head (the governor) of a token (the dependent).  
 isa DIM:TYPE [24] Subtypes: ADJ COMP.
- ADJ** *Adjunct relation* (long: ADJUNCT). A primary adjunct relation.  
 isa PRIM [26] Subtypes: DISCFUNC DISCSEM SYNADJ.
- COMP** *Complement relation* (long: COMPLEMENT). A primary complement relation.  
 isa PRIM [25] Subtypes: "@" adverb SYNCOMP.
- SEC** *Secondary dependency relation* (long: SECONDARY). A secondary dependency relation. Eg, the secondary dependency relation in filler-gap constructions such as relatives without a relative pronoun (the relativized noun is a secondary dependent of the relative verb), raising and control constructions, and elliptic coordinations.  
 isa DIM:TYPE [27] Subtypes: "[" PRIM "]" "{" SEM "}".
