Abstract

This manual describes the inventory of linguistic relations used in the Copenhagen Dependency Treebanks, a set of parallel treebanks for Danish, English, German, Italian, and Spanish annotated with respect to syntax, morphology, discourse, coreference, and translational equivalence. The manual is generated automatically from the CDT project's online relation spreadsheet.[1]

Contents

Chapter 1

Introduction

This manual describes the relations used in the Copenhagen Dependency Treebanks. The relations are ordered in a hierarchy, where each relation may have zero or more immediate super types, and zero or more immediate subtypes. The relations are presented in detail in the following chapters, grouped by linguistic level and general relation type. Every time a relation is introduced, its name is written in the left margin, with an indication of its immediate super types and the row in the online CDT spreadsheet in which the relation was defined. An example is shown below.

relation
isa super
[12]

The notation in the left margin indicates that we now describe the relation relation; it has immediate super type super and is defined in row 12 in the spreadsheet. When describing a relation, we also lists its other properties, if relevant, including its:

- *long name*: we use short names in the annotation for brevity, but long names are sometimes more descriptive, so we provide these as an alias for the short relation name;

- *deprecated names*: when renaming relations, the old name is listed as a deprecated name for backwards compatibility, but it should be avoided in future annotation;

- *immediate subtypes*: the relation names that have been specified as the immediate subtypes of the relation;

- *related types*: lists the relations that are closely related to this relation, in some way or another, and which you might want to consult for clarification or additional information;

- *confusion*: lists relations that are confused with this relation with percentages (ie, the probability that other annotators will use another relation name); the numbers in "Confusion$_{A,A_U,A_L}^{N}$ list the number of times the relation name has been used for a multiply-annotated in-node, and the labeled agreement A, the unlabeled agreement A_U, and the label agreement A_L for the relation.

- *examples*: small annotated text examples that illustrate how the relation is used;

In PDF versions of this document, relation names are clickable so that you can navigate through the relation hierarchy by clicking on the relation names.

Chapter 2

Top-level relations: ANY

ANY: formal top node
    CDT1: Deprecated CDT1 relations
    DIM: dimension
        DIM:LEVEL: dimension: linguistic level
        DIM:TYPE: dimension: annotation type
    RULE: generative type specification rule

Figure 2.1: The relations matching ANY-!DIM:LEVEL-!DIM:TYPE-!RULE-!TOPIC-!CDT1.

ANY
[2]
Formal top node. The formal top node in the type hierarchy. The type hierarchy contains all the annotations (features and relations) used in the Copenhagen Dependency Treebanks; it also contains all other documentation for the treebank, including hierarchically organized topics in the annotation which describe how to annotate particular linguistic constructions in the treebanks.

Subtypes: CDT1 DIM RULE.

CDT1
isa ANY
[420]
Deprecated CDT1 relations. Deprecated relations from the CDT1+2 treebanks.

Subtypes: CDT1ADJ CDT1COMP CDT1GAP.

DIM
isa ANY
[3]
Dimension (long: DIMENSION). A dimension in the type hierarchy. The dimensions include the linguistic level (eg, syntax, morphology, semantics) and the annotation type (eg, primary dependency, secondary dependency, idiomatic construction)

Subtypes: DIM:LEVEL DIM:TYPE.

DIM:LEVEL
isa DIM
[8]
Dimension: linguistic level. A dimension specifying the linguistic level of the relation. The classification of relations into linguistic levels is meant to give a rough classification of the relations that corresponds to the standard terminology in linguistic theory. The classification is intended for human use. It is not an important feature in the underlying linguistic theory, and there are borderline cases where the distinction between the levels is somewhat fuzzy.

Subtypes: ALIGN ANA DISC MORPH ONTO SEM SYN.

DIM:TYPE
isa DIM
[17]
Dimension: annotation type. A dimension specifying the type of the annotation. Eg, a lexical feature or a directed bilexical reiation.

Subtypes: FEAT REL.

RULE
isa ANY
[4]

Generative type specification rule. Generative type specification rules specify how type names are created generatively using rules. A rule consists of a sequence of null-separated items which are either character sequences enclosed in double quotes or type names; parts of a rule may be enclosed in parentheses and followed by an optional repetition operator: "*" (0 or more times), "+" (1 or more times), or "?" (0 or 1 times). When specifying the super types for a generated type, $1 refers to the part of the type name matched within the first pair of parentheses, $2 the part within the second pairs of parentheses, etc. Generated types may be used as super types.

For example, the rule "<"PRIM">" generates all relation names formed by enclosing any relation name from the "PRIM" hierarchy in angle brackets. "<"PRIM("."PRIM)*">" generates all relation names formed by enclosing a "."-separated sequence of "PRIM" relation names in angle brackets.

2.1 Linguistic level dimension: DIM:LEVEL

DIM:LEVEL: dimension: linguistic level
    ALIGN: alignment level
    ANA: anaphor level
    DISC: discourse level
    MORPH: morphology level
    ONTO: ontology level
    SEM: semantic level
    SYN: syntax level

Figure 2.2: The relations matching DIM:LEVEL-!SYNTAX-!MORPH-!DISC-!ANA-!SEM-!ALIGN-!ONTO-!RULE-!TOPIC-!CDT1.

DIM:LEVEL
isa DIM
[8]

Dimension: linguistic level. A dimension specifying the linguistic level of the relation. The classification of relations into linguistic levels is meant to give a rough classification of the relations that corresponds to the standard terminology in linguistic theory. The classification is intended for human use. It is not an important feature in the underlying linguistic theory, and there are borderline cases where the distinction between the levels is somewhat fuzzy.

Subtypes: ALIGN ANA DISC MORPH ONTO SEM SYN.

ALIGN
isa DIM:LEVEL
[15]

Alignment level (long: ALIGNMENT). The alignment level includes alignment relations as well as lexical features associated with alignments.

Subtypes: ALIGNREL.

ANA
isa DIM:LEVEL
[14]

Anaphor level (long: ANAPHORA). The anaphor level includes relations between anaphors and their antecedents, as well as lexical features associated with anaphora.

Subtypes: ANAREL anaphor.

DISC
isa DIM:LEVEL
[11]

Discourse level (long: DISCOURSE). The discourse level includes relations between segments in different sentences, as well as lexical features associated with discourse units.

Subtypes: DISCOTHER DISCPRAG DISCSEM RuleDisc.

MORPH *Morphology level* (long: MORPHOLOGY). The morphological level includes relations between
isa DIM:LEVEL two word segments within a single word, as well as lexical features associated with mor-
[9] phemes.

Subtypes: MORPHCOMP MORPHDERIV RuleMorph.

ONTO *Ontology level* (long: ONTOLOGY). The ontological level includes relations between lexical
isa DIM:LEVEL elements construed as ontological units, as well as lexical features associated with ontological
[13] units.

Subtypes: ONTOCLASS.

SEM *Semantic level* (long: SEMANTICS). The semantic level includes relations between lexical ele-
isa DIM:LEVEL ments construed as functors, arguments, and modifiers, as well as lexical features associated
[12] with semantic units.

Subtypes: SEMREL.

SYN *Syntax level* (long: SYNTAX). The syntactic level includes relations between two segments
isa DIM:LEVEL within a sentence, but not within a single word, as well as lexical features associated with
[10] syntactic units.

Subtypes: SYNADJ SYNCOMP.

2.2   Annotation type dimension: DIM:TYPE

```
DIM:TYPE: dimension: annotation type
    FEAT: lexical feature
    REL: directed bilexical relation
        IDIOM: idiomatic relation
            RuleIdiom: idiomatic relation pattern
        LAND: landing relation
            fill: licensed filler
            land: landed lexical element
        PRIM: primary dependency relation
            +: segment concatenation
            ADJ: adjunct relation
            COMP: complement relation
                RuleOblAdv: valency-bound adverbial
        SEC: secondary dependency relation
            RuleSec: secondary relation pattern
            repl: replacement in gapping coordination
```

Figure 2.3:   The relations matching DIM:TYPE-!SYNTAX-!MORPH-!DISC-!ANA-!SEM-
!ALIGN-!ONTO-!TOPIC-!CDT1.

DIM:TYPE *Dimension: annotation type.* A dimension specifying the type of the annotation. Eg, a lexical
isa DIM feature or a directed bilexical reiation.
[17] Subtypes: FEAT REL.

FEAT *Lexical feature* (long: FEATURE). A lexical feature. Ie, an annotation that describes a particular
isa DIM:TYPE property of a lexical element.
[18]

Subtypes: ONTOCLASS.

REL *Directed bilexical relation* (long: RELATION). A directed bilexical relation. Ie, a directed re-
isa DIM:TYPE lation that goes from one lexical element (the parent, head, governor, nucleus, stem, an-
[19] tecedent) to a dependent lexical element (the child, dependent, satellite, affix, anaphor).
Subtypes: ALIGNREL ANAREL IDIOM LAND PRIM SEC SEMREL.

IDIOM *Idiomatic relation.* An idiomatic relation. The relation links independent lexical elements
isa REL that jointly form an idiomatic lexical unit, ie, a unit where the meaning of the whole cannot
[32] be described as a semantic composition of its parts.

Subtypes: RuleIdiom.
Related types: +.
dobj# nobj#
kick the bucket
0   1   2

RuleIdiom *Idiomatic relation pattern* (long: (SEMREL)"#"). A semantic relation can be marked as id-
isa IDIOM RULE iomatic by putting a trailing "#" after the semantic relation name. The idiom marker is only
[399] used with semantic relations, not with syntactic relations.

warship

attr   attr   nobj
side **effect**   **barco** de guerra
0   **1**   **ship**   of   war
{eval}#   **0**   1   2
                   {goal}#

LAND *Landing relation* (long: LANDING). A relation between a lexical element and its landing site.
isa REL Landing relations are not annotated explicitly in the Copenhagen Dependency Treebanks.
[25] In Discontinuous Grammar, the word order is determined by a projective surface tree. The
projective surface tree can be derived from the deep tree by defining the landing site for
a node as the lowest transitive governor in the deep tree that deeply dominates all nodes
between the node and the transitive governor. The resulting set of landing relations can be
shown to form a projective tree. In this tree, a global word order uniquely corresponds to a
local ordering of all the landed nodes at each landing site.

Subtypes: fill land.

fill *Licensed filler.* A landing relation from a filler licensor to a phonetically empty filler that it
isa LAND licenses. The filler licensor is viewed as the landing site for the filler. Filler relations are never
[27] annotated explicitly in the CDT treebanks, but play an important role in the underlying lin-
guistic theory, Discontinuous Grammar. In DG, a "filler" is a phonetically empty constituent
which is licensed lexically by a "filler licensor" lexeme, and which functions as an anaphoric
element that requires a "filler source" as its antecedent. For example, the relative verb in a
relative construction acts as filler licensor for a filler that essentially provides a copy of the

relativized noun; in control constructions, the controlling verb passes on a copy of the controlled complement to the subordinate verb; and in gapping coordinations, the first conjunct licenses one or more gapping fillers that function as the elided heads of the gapped conjuncts.

land
isa LAND
[26]
Landed lexical element. A landing relation for lexical elements. This relation is used when the landed node is a lexical element rather than a filler. Landing relations are not annotated explicitly in the CDT annotation, but follow implicitly from the other annotation.

Related types: LAND.

PRIM
isa REL
[20]
Primary dependency relation (long: PRIMARY). A primary dependency relation. Ie, a bilexical relation which specifies the primary head associated with each lexical element in the analysis at the level of syntax, discourse, and morphology. The primary dependencies in a well-formed analysis must form a deep tree, which may be non-projective. The deep tree provides the primary interface to the underlying compositional semantics. In particular, the deep tree defines the application order in the compositional semantics by inducing a unique functor-argument tree for each modifier scope, ie, for each ordering of the adjuncts at all nodes in the analysis.

Subtypes: + ADJ COMP.

+
isa PRIM
[33]
Segment concatenation (long: CONCATENATION). A concatenation relation. The relation is used to correct segmentation errors, and specifies that two nodes should have been analyzed as subsegments of the same lexical unit. The relation always goes from a node to its immediately following neighbour in the segmentation.

Related types: IDIOM.
ADJ
isa PRIM
[22]
Adjunct relation (long: ADJUNCT). A primary adjunct relation. The relation is licensed by the adjunct, ie, the lexical entry of the adjunct specifies the adjunct relations licensed by the adjunct, along with the associated semantic interpretation mechanisms and selectional restrictions on the licensed governors. In the compositional semantics, the adjunct acts as a modifier, ie, a functor that as its argument takes the semantic representation corresponding to the governor along with the governor's arguments and lower-scoped adjuncts.

Subtypes: DISCOTHER DISCPRAG DISCSEM SYNADJ.

COMP
isa PRIM
[21]
Complement relation (long: COMPLEMENT). A primary complement relation. The relation is licensed by the governor, ie, the lexical entry of the governor specifies the complement frames that it allows, along with the associated semantic interpretation mechanisms and selectional restrictions associated with each complement role. In the compositional semantics, the complements act as arguments with the governor as their functor.

Subtypes: RuleOblAdv SYNCOMP.

RuleOblAdv
isa COMP RULE
[396]
Valency-bound adverbial (long: "@"ADVERB). An adverbial relation can be marked as obligatory by putting "@" in front of the relation name.

[subj]

She **went** home
subj @dir
0   **1** 2
SEC *Secondary dependency relation* (long: SECONDARY). A secondary dependency relation. Intu-
isa REL itively, if a node functions as a dependent of more than one word (eg, in verbal chains, raising
[24] and control constructions, relatives, and elliptic coordinations), the dependency relation that
determines the word order is encoded as a primary relation, and the remaining dependency
relations are encoded as secondary dependency relations. In terms the underlying linguistic
theory in Discontinuous Grammar, the secondary relations in the CDT annotation encode
that the child node in the secondary dependency functions as the filler source for a filler
that functions as a primary dependent of the parent node. Since the CDT annotation does
not include filler nodes, there is no explicit annotation of the filler and its associated filler
licensor and filler source, and the filler licensor must be reconstructed from the secondary
dependency by means of heuristic rules.

Subtypes: RuleSec ref repl.

Related types: fill fsrc.

RuleSec *Secondary relation pattern* (long: "["PRIM"]"). A secondary relation name is formed by en-
isa RULE SEC closing a primary relation name in square brackets.
[394] Related types: SEC.

She **might** be a nice person
subj   vobj preds attr nobj
0   **1** 2 3 4   5
[subj]
repl *Replacement in gapping coordination.* A relation that encodes a constituent in the first con-
isa SEC junct replaced by a gapping dependent. The relation goes from the head of the replaced
[34] constituent to the head of the gapping dependent. The extraction path for the gapping de-
pendent is defined as the path from the replaced constituent to the head of the first conjunct.

pobj *Prepositional object.* A prepositional object relation. The governor may be a verb, noun, adjective, adverbial, or another preposition. The preposition is analyzed as the head of the prepositional object itself. If the prepositional object is part of a deverbal NP (ie, an NP where the nucleus is derived from a verb), the CDT annotation specifies the underlying role of the NP within the PP by adding a "." followed by the underlying role to the relation, e.g., "pobj.subj" (the NP in the PP would act as subject in the underlying V), "pobj.dobj", "pobj.pobj", and "pobj.iobj"; in these cases, the semantic role "{SEMROLE}" must be annotated as well (the most relevant semantic roles in this context are "agent", "patient", "recipient", "experiencer", "location").
isa SYNCOMP [83]

 0    1     2    3
```
expl *Expletive subject.* An expletive subject relation. The expletive subject is typically a situational
isa subj place adverbial like "there" or time adverbial like "now", and is only possible for verbs that
[81] support the expletive alternation. The expletive alternation applies to all verbs that do not
have a direct object (this observation, due to Richard Hudson, can be used as a test to distin-
guish between direct and indirect objects in verbs that take a single object). The alternation
creates a new lexicalization of the verb by demoting the original subject to the vacant direct
object role (with the restriction that only indefinites are allowed in this direct object role),
and letting the subject role be filled by a situational place or time adverbial.

Related types: subj.

0   1   **2**   3   4   5   6
gapd   *Gapping dependent* (long: GAPPING, deprecated GAP). A relation between a gapping dependent
isa SYNADJ   in a secondary conjunct and the head of the first conjunct. In gapping coordinations, the sec-
[23]   ondary conjuncts have an elided head, so the remaining material in the secondary conjuncts
is analyzed as gapping dependents of the head of the first conjunct instead. In Discontinuous
Grammar, the first conjunct is assumed to generate a gapping filler for each gapping conjunct
which encodes a copy of the entire tree associated with the first conjunct, and the gapping
dependent is analyzed as a primary dependent of this gapping filler; any node within the
copied tree may function as the primary governor of the gapping dependent, but the gapping
filler always functions as the landing site for the gapping dependent, and the gapping depen-
dent functions as an anaphoric element that must identify a phrase within the copied tree
that it replaces, encoded with a "repl" relation.

Chapter 4

Morphological relations: MORPH

MORPH: morphology level
    MORPHCOMP: compositional semantic relations
    MORPHDERIV: derivational semantic relations
    RuleMorph: syntactic morphlogy relation

Figure 4.1: The relations matching MORPH-!CDT1-!MORPHCOMP-!MORPHDERIV-TOPIC.

MORPH
isa DIM:LEVEL
[9]

Morphology level (long: MORPHOLOGY). The morphological level includes relations between two word segments within a single word, as well as lexical features associated with morphemes.

Subtypes: MORPHCOMP MORPHDERIV RuleMorph.

MORPHCOMP
isa MORPH
[299]

Compositional semantic relations. A semantic relation is created between two (or more) elements which could potentially be used as stems. (A compound contains at least two roots.)

Subtypes: _ABOUT _AGENT:MC _CONST _DOBJ.patient _EVAL _FUNC _GOAL _LOC _OTHER _POSS _RESEM _SOURCE _TIME:MC.

MORPHDERIV
isa MORPH
[298]

Derivational semantic relations. A semantic relation is created between a base and an affix

Subtypes: PREFIX SUFFIX.

RuleMorph
isa MORPH RULE
[398]

Syntactic morphlogy relation (long: "_"(PRIM)). A primary syntactic relation that has been used as a morphology relation for stilistic purposes.

4.1   Compositional relations: MORPHCOMP

MORPHCOMP
isa MORPH
[299]

Compositional semantic relations. A semantic relation is created between two (or more) elements which could potentially be used as stems. (A compound contains at least two roots.)

Subtypes: _ABOUT _AGENT:MC _CONST _DOBJ.patient _EVAL _FUNC _GOAL _LOC _OTHER _POSS _RESEM _SOURCE _TIME:MC.

_ABOUT
isa MORPHCOMP
[385]

Noun-noun compound (about). Non-head has an aboutness meaning wrt. head.

MORPHCOMP: compositional semantic relations
    _ABOUT: noun-noun compound (about)
    _AGENT:MC: noun-noun compound (agentive)
    _CONST: noun-noun compound (constitutive)
    _DOBJ.patient:
    _EVAL: noun-noun compound (evaluative)
    _FUNC: noun-noun compound (function)
    _GOAL: noun-noun compound (goal)
    _LOC: noun-noun compound (position)
    _OTHER: noun-noun compound (other)
    _POSS: noun-noun compound (possession)
    _RESEM: noun-noun compound (resemblance)
    _SOURCE: noun-noun compound (origin)
    _TIME:MC: noun-noun compound (time)

Figure 4.2: The relations matching MORPHCOMP-!CDT1-TOPIC.

(theme: skattelov 'tax law' = lov –[skat]te/ABOUT)
0   1   2 3 4 5   6

_AGENT:MC *Noun-noun compound (agentive).* Non-head has an agentive meaning wrt. head.
isa MORPHCOMP
    [376]

(agent: politikontrol 'police control' = kontrol –politi/AGENT)
0   1   2   3   4 5   6

_CONST *Noun-noun compound (constitutive).* Non-head has a constitutive meaning wrt. head.
isa MORPHCOMP
    [375]

(constitutive: træbord 'wooden table' = bord –træ/CONST)
0   1   2   3   4 5   6

_DOBJ.patient .
isa MORPHCOMP

_EVAL *Noun-noun compound (evaluative).* Non-head has an evaluative meaning wrt. head.
isa MORPHCOMP
    [383]

coche de lujo 'luksusbil'
0 1 2   3

_FUNC *Noun-noun compound (function).* Non-head has a functional/instrumental meaning wrt.
isa MORPHCOMP head.
    [378]

(function: vindmølle 'wind mill' =mølle –vind/FUNC)
0   1   2   3   4   5

_GOAL *Noun-noun compound (goal).*
isa MORPHCOMP
    [379]

(goal: krigsskib 'war ship' = skib –[krig]s/GOAL)
0   1   2   3 4 5   6

_LOC
isa MORPHCOMP
[381]

Noun-noun compound (position). Non-head has a locative meaning wrt. head.

(position: loftlampe 'ceiling lamp' = lampe –loft/POS)
0   1   2   3 4 5   6

_OTHER
isa MORPHCOMP
[386]

Noun-noun compound (other). If in doubt about the meaning relation between head and non-head.

_POSS
isa MORPHCOMP
[380]

Noun-noun compound (possession). Non-head has a possessive meaning wrt. head.

(possession: politibil = bil –politi/POSS
0   1 2 3   4

_RESEM
isa MORPHCOMP
[384]

Noun-noun compound (resemblance). Denotations of head and non-head resemble each other.

silla de tijeras 'saksestol' [klapstol], válvula de mariposa 'sommerfugleventil'
0 1 2   3   4   5 6   7   8

_SOURCE
isa MORPHCOMP
[377]

Noun-noun compound (origin). Non-head has a meaning of origin wrt. head.

(origin: rørsukker 'cane sugar' = sukker –rør/ORIGIN)
0   1   2   3 4 5   6

_TIME:MC
isa MORPHCOMP
[382]

Noun-noun compound (time). Non-head has a temporal meaning wrt. head.

(time: oktoberregn 'October rain' = regn –oktober/TIME)
0   1   2   3 4 5   6

_DERva:pas.part   *Verb-adjective derivation (passive participles)* (deprecated DEVERB:pas.part). Suffix creates pas-
isa _DERva:pas   sive adjectives with the form of participles.
[358]

"que {ha sido/está/es} PP" (comprado – **"hombre que {ha sido/está/es} comprado 'mand som er**
0   1   2   3   4   5   6   7   8   9   10   11   12 13

blevet/er/bliver købt"
14   15

_DERvn *Verb-noun derivation* (deprecated PREDDEVERBN). Suffix creates deverbal nouns in a broad
isa _DER sense.
[333]
Subtypes: _DERvn:agent _DERvn:core _DERvn:exper _DERvn:loc _DERvn:other _DERvn:patient _DERvn:recip.

_DERvn:agent *Verb-noun derivation (agent)* (deprecated PRED:agentPRED:inst). Suffix creates deverbal nouns
isa _DERvn absorbing the agent role.
[334]

arbejd   s   giv   er
0   1   2   3
DOBJ.patient interfix DERvn:agent

(agent derivation: singer = sing +er/§DERnv:agent)
0   1   2   3   4   5
exprimidor 'saftpresser' = exprimir +dor/§DERnv:inst
0   1   2   3   4
_DERvn:core *Verb-noun derivation (core)* (deprecated PRED:core). Suffix creates deverbal nouns expressing a
isa _DERvn nominalized version of the situation denoted by the original verb.
[336]

(core derivation: exploitation = exploit@V +ation/§DERnv:core)
0   1   2   3   4   5

_DERvn:exper *Verb-noun derivation (experiencer)* (deprecated PRED:exper). Suffix creates deverbal nouns ab-
isa _DERvn sorbing the experiencer role.
[335]

(experiencer derivation: admirer = admire +r/§DERnv:exper
0   1   2   3   4   5

_DERvn:loc *Verb-noun derivation (location)* (deprecated PRED:loc). Suffix creates deverbal nouns expressing
isa _DERvn the location related to the meaning of the original noun.
[339]

(locative derivation: comedor 'spisestue' = comer +dor/§DERnv:loc)
0   1   2   3   4   5   6

_DERvn:other *Verb-noun derivation (other)* (deprecated PRED:other). If in doubt about the meaning conveyed
isa _DERvn by the suffix
[340]

_DERvn:patient *Verb-noun derivation (patient)* (deprecated PRED:result). Suffix creates deverbal nouns absorb-
isa _DERvn ing the patient role.
[337]

(result derivation: hallazgo 'fund' = hallar +azgo/§DERnv:result)
0　　　1　　　2　　3 4 5　　　6

_DERvn:recip
isa _DERvn
[338]

Verb-noun derivation (recipient) (deprecated PRED:recip). Suffix creates deverbal nouns absorbing the recipient role

(recipient derivation: beneficiario 'den begunstigede' = beneficiar +ario/§DERnv:recip)
0　　　1　　　2　　3　　4　　5　6　　　7

_DERvv
isa _DER
[331]

Verb-verb derivation (deprecated §DER:vv). Suffix triggers a derivation from a verb to another verb.

(verb-->verb derivation: adormecer 'lull to sleep' = dormir --+[a][ecer]/§DERvv)
0　　　1　　　2　　3 4 5 6 7　　　8

_DERan:qual
isa SUFFIX
[341]

Adjective derivation (deprecated QUAL). Suffix creates deadjectival nouns.

(deadjectival noun: bitterness = bitter +ness/§DERan:qual)
0　　　1　　2　　3 4　　　5

_DERna
isa SUFFIX
[361]

Noun-adjective derivation (deprecated DENOM). Suffix creates denominal adjectives in a broad sense.

Subtypes: _DERna:deono _DERna:disp _DERna:other _DERna:poss _DERna:rel _DERna:resem _DERna:telic.

_DERna:deono
isa _DERna
[363]

Noun-adjective derivation (naming) (deprecated DENOM:rel.deono). Suffix creates relational adjectives with the meaning of "naming".

Subtypes: _DERna:deono.loc _DERna:deono.pers.

Confusion$^1_{0\%/100\%/0\%\%}$: DERna:rel$_{100\%}$.

_DERna:deono.loc
isa _DERna:deono
[365]

Noun-adjective derivation (naming places) (deprecated DENOM:rel.deono.place). Suffix creates relational adjectives with the meaning of "naming" of places.

Madrileño 'som har at gøre med/kommer fra Madrid'
0　　 1　2 3　4　　　5　　　6　7

_DERna:deono.pers
isa _DERna:deono
[364]

Noun-adjective derivation (naming persons) (deprecated DENOM:rel.deono.pers). Suffix creates relational adjectives with the meaning of "naming" persons.

Cervantino 'som har at gøre med Cervantes'
0　　　1　2 3 4　5　　　6

_DERna:disp
isa _DERna
[368]

Noun-adjective derivation (disposition) (deprecated DENOM:disp). Suffix creates denominal adjectives that express disposition.

_DERna:other
isa _DERna
[370]

Noun-adjective derivation (other) (deprecated DENOM:other). If in doubt about the meaning conveyed by the suffix

_DERna:poss
isa _DERna
[367]

Noun-adjective derivation (possession) (deprecated DENOM:poss). Suffix creates denominal adjectives that express possession.

"que posee/tiene/lleva N" (barbudo – "que lleva barba" 'skægget/som bærer skæg')
0   1   2   3   4 5   6   7   8   9   10

_DERna:rel
isa _DERna
[362]

Noun-adjective derivation (relational) (deprecated DENOM:rel). Suffix creates denominal adjectives with a relational meaning.

(denominal adjective: presidential = president +ial/DENOM:rel.norm)
0   1   2   3   4   5

_DERna:resem
isa _DERna
[366]

Noun-adjective derivation (resemblance) (deprecated DENOM:resem). Suffix creates denominal adjectives that express resemblance.

"que se parece a N" (sanchopancesco – "que se parece a Sancho Panza" 'sanchopanzask/som ligner
0 1   2   3 4   5   6 7 8   9   10 11   12   13   14

Sancho Panza')
15   16

_DERna:telic
isa _DERna
[369]

Noun-adjective derivation (effect) (deprecated DENOM:eff). Suffix creates denominal adjectives that express an effect.

$\text{Confusion}_{0\%/100\%/0\%\%}^{12}$: $-_{50\%}$ DERna:rel$_{33.3\%}$ DERna:telic$_{8.3\%}$ DERnvDERva:pas.epi$_{8.3\%}$.

"que causa simpatía" (simpático – "que causa simpatía" 'sympatisk/som vækker sympati')
0   1   2   3   4 5   6   7   8   9   10

_DERnn
isa SUFFIX
[342]

Noun-noun derivation (deprecated NOPRED). Suffix creates non-predicative nouns (from other nouns) in a broad sense.

Subtypes: _DERnn:agent _DERnn:assoc _DERnn:capac _DERnn:cont _DERnn:loc _DERnn:other _DERnn:quant _DERnn:telic _DERnn:time.

_DERnn:agent
isa _DERnn
[343]

Noun-noun derivation (agent) (deprecated NOPRED:agent). Suffix creates non-predicative nouns expressing an agent role.

<div style="color:red; text-align:center;">

(agent derivation: miller = mill +er/§DERnn:agent)
0 1 2 3 4 5

</div>

_DERnn:assoc *Noun-noun derivation (association)* (deprecated NOPRED:script). Suffix creates non-predicative
isa _DERnn nouns expressing a script/notion related to the original noun.
[350]

<div style="color:red; text-align:center;">

(script derivation: pontaje 'brobetaling' = puente +aje/§DERnn:assoc)
0 1 2 3 4 5 6

</div>

_DERnn:capac *Noun-noun derivation (capacity)* (deprecated NOPRED:capac). Suffix creates non-predicative
isa _DERnn nouns expressing a capacity.
[348]

<div style="color:red; text-align:center;">

(capacity derivation: cestada 'kurvfuld' = cesta +ada/§DERnn:capac)
0 1 2 3 4 5 6

</div>

_DERnn:cont *Noun-noun derivation (container)* (deprecated NOPRED:cont). Suffix creates non-predicative
isa _DERnn nouns expressing a container.
[345]

<div style="color:red; text-align:center;">

(container derivation: azucarero 'sugar bowl' = azucar +ero/§DERnn:cont)
0 1 2 3 4 5 6 7

</div>

_DERnn:loc *Noun-noun derivation (location)* (deprecated NOPRED:loc). Suffix creates non-predicative nouns
isa _DERnn expressing a location.
[349]

<div style="color:red; text-align:center;">

(locative derivation: arenal 'sandet strækning' = arena +al/§DERnn:loc)
0 1 2 3 4 5 6 7

</div>

_DERnn:other *Noun-noun derivation (other)* (deprecated NOPRED:other). If in doubt about the meaning con-
isa _DERnn veyed by the suffix
[351]

_DERnn:quant *Noun-noun derivation (quantification)* (deprecated NOPRED:set). Suffix creates non-predicative
isa _DERnn nouns expressing a quantification.
[347]

<div style="color:red; text-align:center;">

(set derivation: perrada 'hundekobbel' = perro +ada/§DERnn:quant)
0 1 2 3 4 5 6

</div>

_DERnn:telic *Noun-noun derivation (telic)* (deprecated NOPRED:result). Suffix creates non-predicative nouns
isa _DERnn expressing a telic result.
[344]

<div style="color:red; text-align:center;">

(result derivation: puñalada 'knivstik' = puñal +ada/§DERnn:telic)
0 1 2 3 4 5 6

</div>

_DERnn:time *Noun-noun derivation (time)* (deprecated NOPRED:temp). Suffix creates non-predicative nouns
isa _DERnn expressing a temporal aspect.
[346]

_DERv (deprecated DEVERB).
isa SUFFIX
  [312]
_DIMIN *Diminution.* Suffix conveys diminution.
isa SUFFIX
  [326]

(diminutive: viejecito 'little old man' = viejo +ecito/DIM)
0   1   2 3 4 5 6   7

_PEJ *Pejoration.* Suffix conveys a pejorative sense.
isa SUFFIX
  [327]

(pejorative: vinacho 'bad vine' = vino +acho/PEJ)
0   1   2 3 4 5   6

Figure 5.1: The relations matching DISC-!CDT1-!DISCFUNC-!DISCSEM-TOPIC.

DISC
isa DIM:LEVEL
[11]

Discourse level (long: DISCOURSE). The discourse level includes relations between segments in different sentences, as well as lexical features associated with discourse units.

Subtypes: DISCOTHER DISCPRAG DISCSEM RuleDisc.

DISCOTHER
isa ADJ DISC
[246]

Other discourse relations. In two cases, REP and SCENE, the relations concern the formal structure of the text. In the last case, JOINT, there is no clear relation between the segments in question.

Subtypes: JOINT REP SCENE.

JOINT
isa DISCOTHER
[296]

No clear relation. No evident discourse relation between the segments. The new text segment adds a completely new content without any clear discourse relation to the preceding segment.

Confusion$_{21.4\%/42.9\%/35.7\%\%}^{14}$: CONJ:add$_{42.9\%}$ JOINT$_{35.7\%}$ SCENE$_{7.1\%}$ CONJ$_{7.1\%}$ CONST:exem$_{7.1\%}$.

REP
isa DISCOTHER
[295]

Repaired (deprecated STRUCT:rep). A repaired text segment. The dependent text segment is interrupted and unfinished and "repaired" by the following and governing text segment that completes it.

Would you... (Would you marry me, Lisa?)
0   1   2   3   4   5   6

SCENE
isa DISCOTHER
[294]

Scene (deprecated STRUCT:prepPREP). A scene or similar description. The dependent text segment describes the scene of the following and governing text.

Confusion$_{84.6\%/84.6\%/96.2\%\%}^{26}$: SCENE$_{96.2\%}$ JOINT$_{3.8\%}$.

DISCPRAG *Pragmatic and illocutionary discourse relations* (deprecated DISCFUNC). The dependent text seg-
isa ADJ DISC ment expresses a change in speech act or pragmatic function (speaker's intention) wrt the
[245] governing segment; the label indicates the speech act or function of the dependent segment;
regarding speaker's intentions and speech acts we consider the narrating asserting speech act
as our default value.

Subtypes: ANSW CONSOL DIREC EXPR INTACT QUEST.

DISCSEM *Semantic discourse relations.* The relations hold between the propositions of the governing
isa ADJ DISC and dependent text segments and are defined in semantic terms;
[244] Subtypes: AGENTIVE CONC COND CONJ CONST CONTR DISJ FORMAL TELIC TIME.

RuleDisc *Syntactic discourse relation* (long: "_"(PRIM)). A primary syntactic relation that has been used
isa DISC RULE as a discourse relation for stilistic purposes.
[397]

5.1   Functional relations: DISCFUNC

DISCPRAG: pragmatic and illocutionary discourse relations
    ANSW: answer
    CONSOL: consolidation
        CONSOL:inst: instrumental
        CONSOL:motiv: motivation
        CONSOL:source: source
    DIREC: directive act
    EXPR: expressive act
    INTACT: interaction signals
        INTACT:attn: attention
        INTACT:inter: interruption
        INTACT:start: start signal
        INTACT:stop: stop
    QUEST: question

Figure 5.2: The relations matching DISCFUNC-!CDT1-TOPIC.

DISCPRAG *Pragmatic and illocutionary discourse relations* (deprecated DISCFUNC). The dependent text seg-
isa ADJ DISC ment expresses a change in speech act or pragmatic function (speaker's intention) wrt the
[245] governing segment; the label indicates the speech act or function of the dependent segment;
regarding speaker's intentions and speech acts we consider the narrating asserting speech act
as our default value.

Subtypes: ANSW CONSOL DIREC EXPR INTACT QUEST.

ANSW *Answer.* An answer relation. The dependent text segment contains an answer or solution to
isa DISCPRAG a question or problem contained in the governing text segment.
[281] $\text{Confusion}^1_{100\%/100\%/100\%\%}$: $\text{ANSW}_{100\%}$.

CONSOL *Consolidation* (deprecated SUPPORT?). The dependent text segment consolidates or strengthens
isa DISCPRAG the governing segment.
[289]

Subtypes: CONSOL:inst CONSOL:motiv CONSOL:source.

$\text{Confusion}^2_{0\%/50\%/0\%\%}$: CONJ:elab$_{100\%}$.

CONSOL:inst *Instrumental* (deprecated CONSOL:enabl). An instrumental or helpful text segment. The de-
isa CONSOL pendent text segment is instrumental in helping reader or recipient to carry out the action
[291] mentioned in the governing segment; frequent in directive texts.

For a free catalogue, call...
0 1 2 3 4

CONSOL:motiv *Motivation.* Motivation or encouragement. The dependent text segment motivates, stimu-
isa CONSOL lates or encourages reader or recipient to carry out the action mentioned in the governing
[292] segment.

Prices have never been so low.
0 1 2 3 4 5

CONSOL:source *Source* (deprecated JUSTCONSOL:just). A source or foundation. The dependent text segment
isa CONSOL expresses a source or foundation that justifies the governing segment wrt its content or the
[290] reason for mentioning it at this time and place, thereby strengthening it argumentatively.

$\text{Confusion}^5_{20\%/60\%/20\%\%}$: AGENTIVE:sbj$_{40\%}$ CONJ$_{20\%}$ CONSOL:source$_{20\%}$ CONST:exem$_{20\%}$.

Joe Johnson is an expert at teaching small children. (He says that...). The Rent Act clearly states it.
0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17

DIREC *Directive act.* A directive act. The dependent text segment contains a directive act (order,
isa DISCPRAG command or request) somehow linked to the governing segment.
[282] $\text{Confusion}^3_{0\%/66.7\%/0\%\%}$: CONJ:elab$_{66.7\%}$ CONJ:seq$_{33.3\%}$.

e.g. imperatives
0 1

EXPR *Expressive act.* An expressive act. The dependent text segment contains an expression of the
isa DISCPRAG speaker's attitudes or emotions, e.g. congratulations, excuses or thanks, somehow linked to
[283] the governing segment.

[en] I'm sorry! My condolences! Thank you so much!
0 1 2 3 4 5 6 7 8

INTACT *Interaction signals.* The dependent text segment contains an interaction signal, i.e. a signal
isa DISCPRAG used to start, sustain or end a conversation.
[284] Subtypes: INTACT:attn INTACT:inter INTACT:start INTACT:stop.

INTACT:attn *Attention.* An attention signal. The dependent text segment contains an attention signal.
isa INTACT
[286]

INTACT:inter
isa INTACT
[287]

Interruption. An interruption signal. The dependent text segment contains an interruption signal

[en] Yeah?, Oh!, Really? [da] Ja; Nå; OK; [it] Sì; Beh
0   1   2   3   4   5   6   7 8 9 10

[en] But... But, Just a moment!; [da] Jamen... Men..., Må jeg lige; [it] Ma; Un momento; Scusami
0   1   2   3   4   5   6   7   8   9 10 11 12 13 14   15   16

INTACT:start
isa INTACT
[285]

Start signal. The dependent text segment contains a start signal.

[en] Hello? All right! Well, Well you see, Excuse me; [da] Hallo? Altså, Nå men altså, Jamen, Hør lige her!
0   1   2   3   4   5   6   7   8   9   10   11   12   13 14   15   16   17 18 19

Undskyld! Du Peter; [it] Pronto? Ciao, Ecco, Guarda, Scusami
20   21   22   23   24   25   26   27
**   28**

INTACT:stop
isa INTACT
[288]

Stop. The dependent text segment contains a conversation stop signal.

[en] Goodbye; [da] Hej hej; [it] Ciao; Arrivederci
0   1   2   3   4   5   6   7

QUEST
isa DISCPRAG
[280]

Question . A question relation. The dependent text segment contains a question somehow linked to the governing segment. The following co-text may and may not contain an answer to the question.

Related types: answer.

5.2 Semantic relations: DISCSEM

DISCSEM
isa ADJ DISC
[244]

Semantic discourse relations. The relations hold between the propositions of the governing and dependent text segments and are defined in semantic terms;

Subtypes: AGENTIVE CONC COND CONJ CONST CONTR DISJ FORMAL TELIC TIME.

AGENTIVE
isa DISCSEM
[248]

Cause relation (discourse). The dependent segment expresses "bringing about" or cause in a broad sense

Subtypes: AGENTIVE:expl AGENTIVE:reas AGENTIVE:sbj.

Confusion$_{0\%/100\%/0\%}^{5}$: CONJ:elab$_{40\%}$ AGENTIVE:sbj$_{40\%}$ AGENTIVE:expl$_{20\%}$.

AGENTIVE:expl
isa AGENTIVE
[249]

Explanation relation in discourse. An explanation relation. The dependent segment explains the governing segment. The relation is more general and elaborating than "reason".

Figure 5.3: The relations matching DISCSEM-!CDT1-TOPIC.

Typical connectives: [en] In fact, Indeed; [da] Nemlig; [it] Infatti.

Related types: reason.

Confusion$_{63.6\%/100\%/63.6\%\%}^{11}$: AGENTIVE:expl$_{63.6\%}$ CONTR$_{9.1\%}$ AGENTIVE$_{9.1\%}$ CONST:rest$_{9.1\%}$ AGENTIVE:sbj$_{9.1\%}$

.

AGENTIVE:reas
isa AGENTIVE
[250]

Reason relation (discourse). A reason relation. The dependent segment expresses a specific and concrete reason.

Typical connectives: [en] Since, Because; [da] Fordi, Eftersom; [it] Perché, Dato che.

Confusion$_{20\%/60\%/20\%\%}^{10}$: AGENTIVE:sbj$_{40\%}$ AGENTIVE:reas$_{20\%}$ CONJ:elab$_{20\%}$ CONJ:add$_{10\%}$ TELIC:cons.dir$_{10\%}$.

AGENTIVE:sbj
isa AGENTIVE
[251]

Subjective cause. A subjective cause. The speaker uses the dependent segment as a subjective/personal argument to support a claim.

Typical connectives: [en] Because, In fact, Indeed; [da] Fordi, Eftersom, Nemlig; [it] Perché, Dato che, Infatti.

Confusion$_{0\%/75\%/0\%\%}^{16}$: AGENTIVE:reas$_{25\%}$ CONJ:add$_{18.8\%}$ CONJ$_{12.5\%}$ CONJ:elab$_{12.5\%}$ AGENTIVE$_{12.5\%}$ CONSOL:source$_{12.5\%}$ AGENTIVE:expl$_{6.3\%}$.

CONC
isa DISCSEM
[263]

Concession. A concession relation. The dependent segment admits or acknowledges a fact wrt N, which may however not have the expected consequence or effect.

Typical connectives: [en] Though, Although, However; [da] Skønt; Selvom; [it] Anche se; Sebbene.

Confusion$_{40\%/65\%/40\%\%}^{20}$: CONC$_{40\%}$ CONJ:add$_{25\%}$ CONTR$_{5\%}$ FORMAL:eval$_{5\%}$ subj$_{5\%}$ CONTR:sbj$_{5\%}$ CONJ$_{5\%}$ CONST:exem$_{5\%}$ conj$_{2.5\%}$ CONTR:prg$_{2.5\%}$.

COND
isa DISCSEM
[264]

Condition. A condition relation. The dependent segment expresses a condition for the realisation of the content of the gonerning segment.

Typical connectives: [en] If, On the condition; [da] Hvis; I det tilfælde at; [it] A condizione che/di; Se.

Confusion$_{0\%/100\%/0\%\%}^{1}$: CONJ:add$_{100\%}$.

CONJ
isa DISCSEM
[269]

Conjunction. The dependent text segment elaborates and expans knowledge of the content of the governing text segment or adds a new subject somehow related to it

Subtypes: CONJ:add CONJ:elab CONJ:seq.

Confusion$_{10.4\%/54.2\%/18.8\%\%}^{48}$: CONJ:elab$_{35.4\%}$ CONJ:add$_{25\%}$ CONJ$_{18.8\%}$ AGENTIVE:sbj$_{4.2\%}$ TELIC:goal$_{2.1\%}$ TELIC:cons.sbj$_{2.1\%}$ FORMAL:eval$_{2.1\%}$ JOINT$_{2.1\%}$ CONSOL:source$_{2.1\%}$ TELIC:cons.dir$_{2.1\%}$ CONST:apart$_{2.1\%}$ CONC$_{2.1\%}$.

CONJ:add
isa CONJ
[270]

Conjunction, addition. An addition relation. The dependent text segment adds a new subject somehow related to the governing text segment; in cases of uncertainty between add and elab we do not specify the subtype.

Typical connectives: [en] And, Moreover, In addition to that; [da] Endvidere, Desuden; [it] E, Oltre a ciò.

Confusion$_{37.2\%/63.5\%/47.2\%\%}^{133}$: CONJ:add$_{47.2\%}$ CONJ:elab$_{13.5\%}$ CONJ$_{9\%}$ JOINT$_{4.5\%}$ conj$_{4.4\%}$ CONC$_{3.8\%}$ TELIC:cons.sbj$_{2.3\%}$ AGENTIVE:sbj$_{2.3\%}$ CONJ:seq$_{1.5\%}$ CONST:exem$_{1.5\%}$ CONST:apart$_{1.5\%}$ CONTR$_{0.8\%}$ TIME:pre$_{0.8\%}$ CONTR:prg$_{0.8\%}$ CONTR:sbj$_{0.8\%}$ COND$_{0.8\%}$ qobj$_{0.8\%}$ TELIC$_{0.8\%}$ TELIC:cons.dir$_{0.8\%}$ AGENTIVE:reas$_{0.8\%}$ DISJ:dir$_{0.8\%}$ vobj$_{0.8\%}$ CONTR:dir$_{0.3\%}$.

CONJ:elab
isa CONJ
[271]

Conjunction, elaboration (deprecated ELAB:spec,ELAB:exp,CONST:elab). An elaboration relation. The dependent text segment elaborates and expans knowledge of the content of the governing text segment; in cases of uncertainty between add and elab we do not specify the subtype

Confusion$_{0\%/100\%/0\%\%}^{1}$: CONJ:elab$_{100\%}$.

CONJ:seq
isa CONJ
[272]

Conjunction, sequence. A sequence relation. The dependent text segment is part of list or sequence linked to the governing text segment as e.g. in recipes, sport results etc.

Confusion$_{61.5\%/92.3\%/69.2\%\%}^{13}$: CONJ:seq$_{69.2\%}$ CONJ:add$_{15.4\%}$ CONJ:elab$_{7.7\%}$ DIREC$_{7.7\%}$.

CONST
isa DISCSEM
[256]

Constitutive elaboration relation. The dependent segment adds more details regarding the constitution of the governing segments or part(s) of it.

Subtypes: CONST:apart CONST:exem CONST:rest.

Confusion$_{0\%/100\%/0\%\%}^{39}$: const$_{66.7\%}$ agent$_{12.8\%}$ −$_{5.1\%}$ source$_{2.6\%}$ MOD:qual$_{2.6\%}$ arg$_{2.6\%}$ argloc$_{2.6\%}$ func$_{2.6\%}$ apart$_{2.6\%}$.

CONST:apart
isa CONST
[258]

Part of relation. A part-of relation. The dependent segment expresses a part of the governing segment or vice versa.

Typical connectives: [en] Including, Herein; [da] Herunder, Heri; [it] Incluso, Tra cui.

Confusion$_{16.7\%/58.3\%/25\%\%}^{12}$: CONJ:elab$_{25\%}$ CONST:apart$_{25\%}$ CONJ:add$_{16.7\%}$ CONST:exem$_{16.7\%}$ CONJ$_{8.3\%}$ nobj$_{8.3\%}$.

CONST:exem
isa CONST
[257]

Exemplification. A constitutive exemplification relation. The dependent segment gives examples of elements or phenomena regarding the governing segment.

Typical connectives: [en] For example; [da] For eksempel; [it] Per esempio.

Confusion$^{17}_{29.4\%/70.6\%/47.1\%\%}$: CONST:exem$_{47.1\%}$ CONJ:add$_{11.8\%}$ CONST:apart$_{11.8\%}$ CONJ:elab$_{5.9\%}$ JOINT$_{5.9\%}$ CONST:rest$_{5.9\%}$ CONSOL:source$_{5.9\%}$ CONC$_{5.9\%}$.

CONST:rest
isa CONST
[259]

Restatement. A restatement relation. The dependent segment states the governing segment again in a different way

Typical connectives: [en] In other words, Or; [da] Dvs., Sagt på en anden måde; [it] Ossia, In altre parole, Cioè.
Confusion$^{11}_{22.7\%/59.1\%/25.8\%\%}$: CONJ:elab$_{27.3\%}$ CONST:rest$_{25.8\%}$ TELIC:cons.sbj$_{9.1\%}$ TELIC:cons.dir$_{9.1\%}$ CONST:exem$_{9.1\%}$ AGENTIVE:expl$_{9.1\%}$ conj$_{6.1\%}$ qobj$_{4.5\%}$.

CONTR
isa DISCSEM
[273]

Contrast. The dependent text segment expresses a contrast wrt the governing text segment.

Subtypes: CONTR:dir CONTR:sbj.
Confusion$^{4}_{0\%/100\%/0\%\%}$: CONJ:add$_{25\%}$ AGENTIVE:expl$_{25\%}$ CONTR:dir$_{25\%}$ CONC$_{25\%}$.

CONTR:dir
isa CONTR
[274]

Direct contrast. A direct contrast relation. The contrast lies between the governing and dependent text segment.

Typical connectives: [en] But, However; [da] Men, Derimod; [it] Ma, Invece.
Confusion$^{14}_{16.7\%/31\%/31\%\%}$: CONTR:dir$_{31\%}$ conj$_{20.2\%}$ CONTR:prg$_{10.7\%}$ CONTR$_{7.1\%}$ CONJ:elab$_{7.1\%}$ TELIC:cons.sbj$_{7.1\%}$ TELIC:cons.dir$_{7.1\%}$ CONTR:sbj$_{7.1\%}$ CONJ:add$_{2.4\%}$.

CONTR:sbj
isa CONTR
[275]

Subjective contrast (deprecated CONTR:prg). A subjective contrast relation. The contrast lies between an explicit and a subjectively inferred text segment.

Typical connectives: [en] But, However; [da] Men, Derimod; [it] Ma, Invece.
Confusion$^{12}_{19.4\%/48.6\%/31.9\%\%}$: CONTR:sbj$_{31.9\%}$ conj$_{13.9\%}$ CONJ:elab$_{8.3\%}$ CONTR:prg$_{8.3\%}$ CONJ:add$_{8.3\%}$ qobj$_{8.3\%}$ CONTR:dir$_{8.3\%}$ CONC$_{8.3\%}$ TELIC:cons.dir$_{4.2\%}$.

DISJ
isa DISCSEM
[276]

Disjunction. There is a disjunction relation between the governing and dependent text segment.

Subtypes: DISJ:dir DISJ:sbj.

DISJ:dir
isa DISJ
[277]

Direct disjunction. A direct disjunction relation. The disjunction lies between the governing and dependent text segment.

Typical connectives: [en] Or, Or else, Otherwise; [da] Eller, Ellers; [it] Oppure, Altrimenti.
Confusion$^{2}_{0\%/50\%/50\%\%}$: CONJ:add$_{50\%}$ DISJ:dir$_{50\%}$.

DISJ:sbj
isa DISJ
[278]

Subjective disjunction (deprecated DISJ:prg). An indirect or subjective disjunction relation. The disjunction lies between the dependent and a subjectively inferred text segment.

Typical connectives: [en] Or, Or else, Otherwise; [da] Eller, Ellers; [it] Oppure, Altrimenti.

FORMAL
isa DISCSEM
[260]

Formal description. The dependent segment describes the governing segment wrt its formal quale (form, dimension, colour, etc.). The governing segment may be a first-order or second-order entity.

Subtypes: FORMAL:descr FORMAL:eval.

FORMAL:descr
isa FORMAL
[261]

Neutral description (deprecated DESCR:qual). An objective and neutral description relation. The dependent segment expresses an objective and/or neutral description of the governing segment.

Confusion$^{5}_{20\%/40\%/20\%\%}$: CONJ:elab$_{60\%}$ conj$_{20\%}$ FORMAL:descr$_{20\%}$.

FORMAL:eval
isa FORMAL
[262]

Positive/negative evaluation (deprecated DESCR:eval). A personal and subjective description relation. The dependent segment expresses a personal and/or subjective description of the governing segment.

Confusion$_{20\%/40\%/30\%\%}^{10}$: CONJ:elab$_{50\%}$ FORMAL:eval$_{30\%}$ CONJ$_{10\%}$ CONC$_{10\%}$.

TELIC *Consequence/result/conclusion/goal relation (discourse).* The dependent segment expresses
isa DISCSEM consequence, result, purpose, conclusion or goal wrt the governing segment.
[252] Subtypes: TELIC:cons.dir TELIC:cons.sbj TELIC:goal.

Confusion$_{28.6\%/100\%/28.6\%\%}^{119}$: −35.3% TELIC$_{28.6\%}$ PRE:other$_{10.1\%}$ TRANS$_{4.2\%}$ LOC:dir$_{4.2\%}$ PRE:otherDERva:pas.part$_{2.5\%}$
TELIC]t$_{2.5\%}$ MOD:qual$_{2.5\%}$ NEG:contr$_{0.8\%}$ ASPEC:resutl$_{0.8\%}$ TELIC]l$_{0.8\%}$ DERvn:core$_{0.8\%}$ MOD:eval$_{0.8\%}$
NEG:rev$_{0.8\%}$ dobj.patient$_{0.8\%}$ TELIC]kDERva:pas.part$_{0.8\%}$ SPACE:source$_{0.8\%}$ SPACE:sourceDERva:pas.part$_{0.8\%}$
ASPEC:result$_{0.8\%}$ NEG:priv$_{0.8\%}$.

TELIC:cons.dir *Direct, physical consequence, result* (deprecated TELIC:dir). A consequence or result relation.
isa TELIC The dependent segment expresses a physical and/or objectively observed consequence or
[254] result wrt the governing segment.
Typical connectives: [en] Therefore, For this reason; [da] Derfor, Af den grund; [it] Perciò, Quindi.

Confusion$_{29.4\%/58.8\%/41.2\%\%}^{17}$: TELIC:cons.dir$_{41.2\%}$ TELIC:cons.sbj$_{11.8\%}$ CONJ:elab$_{8.8\%}$ CONST:rest$_{5.9\%}$ CONJ$_{5.9\%}$
CONJ:add$_{5.9\%}$ AGENTIVE:reas$_{5.9\%}$ CONTR:dir$_{5.9\%}$ conj$_{2.9\%}$ CONTR:sbj$_{2.9\%}$ qobj$_{2.9\%}$.

TELIC:cons.sbj *Pragmatic/personal conclusion, deduction* (deprecated TELIC:sbj). A personal conclusion or de-
isa TELIC duction relation. The dependent segment expresses a subjective conclusion or deduction on
[255] behalf of the speaker.
Typical connectives: [en] Therefore, For this reason; [da] Derfor, Af den grund; [it] Perciò, Quindi.

Confusion$_{21.4\%/64.3\%/28.6\%\%}^{14}$: TELIC:cons.sbj$_{28.6\%}$ CONJ:add$_{21.4\%}$ CONJ:elab$_{14.3\%}$ TELIC:cons.dir$_{14.3\%}$ CONJ$_{7.1\%}$
CONST:rest$_{7.1\%}$ CONTR:dir$_{7.1\%}$.

TELIC:goal *Goal relation (discourse).* A goal relation. The dependent segment expresses goal, purpose,
isa TELIC aim or the like wrt the governing segment.
[253] Confusion$_{0\%/100\%/0\%\%}^{1}$: CONJ$_{100\%}$.

TIME *Temporal relation* (deprecated CIRCUM). There is a clear temporal relation between the contents
isa DISCSEM of the two text segments.
[265] Subtypes: TIME:cont TIME:post TIME:pre.

Confusion$_{0\%/100\%/0\%\%}^{1}$: time$_{100\%}$.

TIME:cont *Contemporaneity* (deprecated nowincludesabolishedTIME:dur). A contemporaneity relation. The
isa TIME events of the two text segments occur simultaneously.
[266] Typical connectives: [en] At the same time, Meanwhile; [da] Samtidig, Mens, Så længe, Da; [it] Contemporanea-
mente.

TIME:post *Temporal succession* (deprecated TIME:succ). A succession relation. The event described in the
isa TIME dependent text segment succeeds the one described in the governing segment.
[268] Typical connectives: [en] Later, Some time afterwards; [da] Senere, Nogen tid efter; [it] Dopo, Poco tempo dopo.

Confusion$_{66.7\%/100\%/66.7\%\%}^{3}$: TIME:post$_{66.7\%}$ TRANS$_{33.3\%}$.

TIME:pre *Temporal precedence* (deprecated TIME:prec). A precedence relation. The event described in the
isa TIME dependent text segment precedes the one described in the governing segment.
[267] Typical connectives: [en] Earlier, Some days before; [da] Før det, Forinden; [it] Prima, Tre giorni prima.

Confusion$_{50\%/100\%/50\%\%}^{4}$: TIME:pre$_{50\%}$ −$_{25\%}$ time$_{25\%}$.

Chapter 6

Anaphor relations: ANA

ANA: anaphor level
    ANAREL: anaphor-antecedent relation
    anaphor:
        assoc: associative anaphor
        coref: coreference

Figure 6.1: The relations matching ANA-!CDT1-!coref-!assoc-TOPIC.

ANA
isa DIM:LEVEL
[14]

Anaphor level (long: ANAPHORA). The anaphor level includes relations between anaphors and their antecedents, as well as lexical features associated with anaphora.
Subtypes: ANAREL anaphor.

ANAREL
isa ANA REL
[28]

Anaphor-antecedent relation. An anaphor-antecedent relation, i.e. a relation between an anaphor (pronoun, definite description, etc.) and an antecedent. The anaphor may be either coreferential, i.e. it designates the same discourse referent as the antecedent, or associative. In the latter case, the anaphor designates a non-previously mentioned referent that is associable with the antecedent either wrt the antecedent's qualia structure or wrt some other semantic relation. The relation arrow goes from antecedent to anaphor.

anaphor
isa ANA
[207]

. This section concerns anaphors as well as cataphors. Cataphors may by and large express the same relations with their postcedents as anaphors with their antecedents; the relations are therefore labelled identically and will be distinguished solely by the arrow direction: from left to right (anaphors) or from right to left (cataphors). Because of their much higher frequency, we shall limit ourselves to examples of anaphors.

Subtypes: assoc coref.

assoc
isa anaphor
[218]

Associative anaphor. The anaphor designates an entity which is associated with the antecedent

Subtypes: assoc-OTHER assoc-QUALIA assoc-SEMROLE.

$\text{Confusion}^{6}_{33.3\%/83.3\%/33.3\%\%}$: $\text{assoc-const}_{66.7\%}$ $\text{assoc}_{33.3\%}$.

coref
isa anaphor
[210]

Coreference. The anaphor designates the same entity as the antecedent; all coreferential pronouns are labelled this way
Subtypes: coref-ell coref-evol coref-iden coref-res coref-var ref.

$\text{Confusion}^{238}_{60.6\%/63.7\%/89.1\%\%}$: $\text{coref}_{89.1\%}$ $\text{coref-var}_{6.8\%}$ $\text{ref}_{1.3\%}$ $\text{coref-res}_{1.3\%}$ $\text{assoc-const}_{0.6\%}$ $\text{coref-iden}_{0.6\%}$ assoc-agentive.agent$_{0.4\%}$.

I had bought some wine but Maria has drunk it all.

	vobj		dobj	nobj	pnct	coord	subj	dobj	conj	vobj	pnct

        {time}:

Figure 7.1: The relations matching SEM-!CDT1-!QUALIA-!SEMROLE-TOPIC.

SEM   *Semantic level* (long: SEMANTICS). The semantic level includes relations between lexical ele-
isa DIM:LEVEL   ments construed as functors, arguments, and modifiers, as well as lexical features associated
[12]   with semantic units.

Subtypes: SEMREL.

SEMREL   *Semantic role.* A semantic relation. The semantic relation specifies the argument role that
isa REL SEM
[29]

the child node fills with the parent node as its functor in the functor-argument structure, and encodes the semantic head in phrases headed by a function word without independent semantic meaning. In the DTAG visualization, semantic roles are drawn below the words. Semantic relations are always specified in parallel with a syntactic relation, whose type is determined by the word class of the involved lexical elements.

The DTAG annotation tool automatically replaces a relation with label "PRIM{SEMREL}" with two relations, one with label "PRIM" and one with label "{SEMREL}", so that relations of this form are drawn as two arrows. Relation names of this form are not strictly relation labels in their own right, merely shorthands in DTAG.

Subtypes: QUALIA {about} {agent} {apart} {arg} {cause} {class} {const} {elab} {eval} {event} {experiencer} {form} {func} {goal} {iden} {location} {loc} {other} {patient} {poss} {quant} {recipient} {resem} {source} {time}.
QUALIA *Qualia role.* A qualia role. Ie, a semantic relation that links a lexeme to a qualia role associated
isa SEMREL with that lexeme. Eg, "music" to the act of "composing" (agentive), "listening" (telic), etc.
[30]
Subtypes: agentive const formal resemblance telic.

{about} . Used in noun phrases where the modifier indicates the content or genre of the head, which
isa SEMREL typically denotes a semiotic artefact.
[62]
Confusion$^{30}_{43.3\%/96.7\%/43.3\%\%}$: {about}$_{43.3\%}$ {arg}$_{20\%}$ {patient}$_{20\%}$ {goal}$_{6.7\%}$ {func}$_{6.7\%}$ {loc}$_{3.3\%}$.

{agent} *An object or a person that performs an action.* Used in noun phrases where the modifier is
isa SEMREL   the object or the person that performs the volitional action indicated by the head.
[50]   Confusion$_{58.5\%/95.4\%/60\%\%}^{65}$: {agent}$_{60\%}$ {arg}$_{26.2\%}$ {patient}$_{4.6\%}$ {experiencer}$_{4.6\%}$ {loc}$_{1.5\%}$ {goal}$_{1.5\%}$ {source}$_{1.5\%}$.

$$\text{attr}$$

police **violence**
0   **1**

{agent}#

{apart} . Used in noun phrases where the modifier specifies an arbitary part of the head. Please note
isa SEMREL   that the semantic relation goes from the modifier to the head in opposition to the main part
[63]   of the other semantic roles.

Confusion$_{42.1\%/100\%/42.1\%\%}^{19}$: {quant}$_{47.4\%}$ {apart}$_{42.1\%}$ {loc}$_{5.3\%}$ {const}$_{5.3\%}$.

    telic: telic qualia
        about: about qualia

Figure 7.2: The relations matching QUALIA-!CDT1.

QUALIA *Qualia role.* A qualia role. Ie, a semantic relation that links a lexeme to a qualia role associated
isa SEMREL with that lexeme. Eg, "music" to the act of "composing" (agentive), "listening" (telic), etc.

[30]

Subtypes: agentive const formal resemblance telic.

agentive
isa QUALIA
[41]
Agentive qualia. A relation which describes the origin of an object. E.g., its creator, artifact, natural kind, causal chain (cf. Pustejovsky 1995).

const
isa QUALIA
[38]
Constitutive qualia (long: constitutive). A relation between an object and its constituents or proper parts. E.g., material, weight, parts and component elements (cf. Pustejovsky 1995).

Confusion$_{0\%/100\%/0\%\%}^{38}$: CONST$_{68.4\%}$ $-_{7.9\%}$ ABOUT$_{7.9\%}$ GOAL$_{5.3\%}$ ARG$_{5.3\%}$ MOD:qual$_{2.6\%}$ SOURCE$_{2.6\%}$.

formal
isa QUALIA
[39]
Formal qualia. A property that distinguishes the object within a larger domain. E.g., its orientation, magnitude, shape, dimensionality, color, position (cf. Pustejovsky 1995).

Subtypes: location.

location
isa formal
[42]
Location qualia. A qualia role that relates a lexeme to its location qualia.

resemblance
isa QUALIA
[44]
Resemblance wrt. qualia role. Resemblance wrt. some qualia role

Subtypes: ""QUALIA.

""QUALIA
isa RULE resemblance
[45]
Resemblance wrt. $qualia relation.

telic
isa QUALIA
[40]
Telic qualia. A relation which describes the purpose and function of the object. E.g., the purpose of performing an act, the intended use of an artifact (cf. Pustejovsky 1995).

Subtypes: about.

about
isa telic
[43]
About qualia. Relates to hyponym (subtype)

Confusion$_{0\%/100\%/0\%\%}^{34}$: ABOUT$_{41.2\%}$ ARG$_{20.6\%}$ AGENT:MCPRE:other$_{8.8\%}$ OTHER$_{5.9\%}$ DERvn:coreDOBJ.patient$_{5.9\%}$ ABOUT]k$_{5.9\%}$ PRE:other$_{5.9\%}$ $-_{2.9\%}$ FORM$_{2.9\%}$.

7.2 Thematic role relations: SEMROLE

Figure 7.3: The relations matching SEMROLE-!CDT1.

Chapter 8

Word alignment relations: ALIGN

ALIGN: alignment level
ALIGNREL: alignment relation
"": unlabeled word alignment
f: fuzzy word alignment

Figure 8.1: The relations matching ALIGN-!CDT1-TOPIC.

ALIGN
isa DIM:LEVEL
[15]

Alignment level (long: ALIGNMENT). The alignment level includes alignment relations as well as lexical features associated with alignments.

Subtypes: ALIGNREL.

ALIGNREL
isa ALIGN REL
[31]

Alignment relation. An alignment relation. An alignment relation encodes a translational equivalence between two sets of words (and their associated phrases), either in terms of form or meaning. Null alignments - ie, a set of words in one text which does not correspond to any set of words in the other text - are encoded as a set of words that is aligned to itself.

Subtypes: "" f.

""
isa ALIGNREL
[415]

Unlabeled word alignment (long: align). An unlabeled word alignment is represented as a word alignment where the label is an empty string. It is used to represent the default word alignment, where there is full translational equivalence between the two sets of words.

f
isa ALIGNREL
[416]
Fuzzy word alignment (long: fuzzy). A semantically fuzzy word alignment.

Chapter 9

Rule schemata for complex relations: RULE

RULE: generative type specification rule
  ""QUALIA: resemblance wrt. $qualia relation
  RuleAnd: conjunctive both-and type
  RuleAttr: attribution
  RuleAttrD: down-dependent in attribution
  RuleAttrH: down-head in attribution
  RuleDisc: syntactic discourse relation
  RuleExpConn: explicit connector
  RuleGap: gapping dependent
  RuleIdiom: idiomatic relation pattern
  RuleImpConn: implicit connector
  RuleMorph: syntactic morphlogy relation
  RuleOblAdv: valency-bound adverbial
  RuleOr: disjunctive either-or type
  RulePar: disambiguated type
  RuleSec: secondary relation pattern

Figure 9.1: The relations matching RULE-!CDT1-TOPIC.

RULE
isa ANY
[4]

Generative type specification rule. Generative type specification rules specify how type names are created generatively using rules. A rule consists of a sequence of null-separated items which are either character sequences enclosed in double quotes or type names; parts of a rule may be enclosed in parentheses and followed by an optional repetition operator: "*" (0 or more times), "+" (1 or more times), or "?" (0 or 1 times). When specifying the super types for a generated type, $1 refers to the part of the type name matched within the first pair of parentheses, $2 the part within the second pairs of parentheses, etc. Generated types may be used as super types.

For example, the rule "<"PRIM">" generates all relation names formed by enclosing any relation name from the "PRIM" hierarchy in angle brackets. "<"PRIM(","PRIM)*">" generates all relation names formed by enclosing a ","-separated sequence of "PRIM" relation names in angle brackets.

Subtypes: ""QUALIA RuleAnd RuleAttr RuleAttrD RuleAttrH RuleDisc RuleExpConn RuleGap RuleIdiom RuleImpConn RuleMorph RuleOblAdv RuleOr RulePar RuleSec.

""QUALIA
isa RULE resemblance
[45]

Resemblance wrt. $qualia relation.

80

RuleAnd *Conjunctive both-and type* (long: (REL)"&"(REL)). Conjunctive both-and relation types can
isa RULE be formed as "&"-separated lists of relation types. Conjunctive relation types are used by
[390] the annotators when two or more relation types seem to hold simultaneously. They may be
removed from later versions of the CDT treebanks.

RuleAttr *Attribution* (long: (PRIM)"/ATTR"INTEGER). Specifies the person to whom the utterance is
isa ATTRIBUTION RULE attributed (ATTR or ATTR1, ATTR2, ... when there is more than one person)
[402]

RuleAttrD *Down-dependent in attribution* (long: DISC"*"). The dependent in the relation is one step
isa RULE further down in the attribution chain
[404]

RuleAttrH *Down-head in attribution* (long: "*"DISC). The head in the relation is one step further down in
isa RULE the attribution chain
[403]

RuleDisc *Syntactic discourse relation* (long: "_"(PRIM)). A primary syntactic relation that has been used
isa DISC RULE as a discourse relation for stilistic purposes.
[397]

RuleExpConn *Explicit connector* (long: PRIM"/"CONNECTOR). The discourse relation has explicit connector
isa RULE $CONNECTOR
[405]

RuleGap *Gapping dependent* (long: "<"PRIM(":"PRIM)*":"INTEGER">"). A gapping dependency rela-
isa RULE gapd tion is formed by using angled brackets to enclose a colon-separated list of primary relations
[395] followed by an integer that indicates the number of the gapped conjunct, starting with 1.
The list of primary relations describes the path from the head of the gapped conjunct to the
gapping dependent within the gapped conjunct, viewed as a copy of the tree structure within
the first conjunct.

RuleIdiom *Idiomatic relation pattern* (long: (SEMREL)"#"). A semantic relation can be marked as id-
isa IDIOM RULE iomatic by putting a trailing "#" after the semantic relation name. The idiom marker is only
[399] used with semantic relations, not with syntactic relations.
RuleImpConn
isa RULE
[406]
Implicit connector (long: PRIM"/("CONNECTOR")"). The discourse relation has implicit connector $CONNECTOR

RuleMorph
isa MORPH RULE
[398]
Syntactic morphlogy relation (long: "_"(PRIM)). A primary syntactic relation that has been used as a morphology relation for stilistic purposes.

RuleOblAdv
isa COMP RULE
[396]
Valency-bound adverbial (long: "@"ADVERB). An adverbial relation can be marked as obligatory by putting "@" in front of the relation name.
Related types: cont dir dur ext hab loc prec succ time.
RuleOr
isa RULE
[391]
Disjunctive either-or type (long: (REL)"|"(REL)). Disjunctive either-or relation types can be formed as "|"-separated lists of relation types. Disjunctive relations types are used by the annotators when one of the relation types in the disjunction seems to provide the right label for the relation, but it is difficult to decide which one of them is most appropriate. They may be removed from later versions of the CDT treebanks.

RulePar
isa RULE
[392]
Disambiguated type (long: "("(REL)")"). Relation types can be disambiguated by enclosing them in parentheses. The need for disambiguation normally only arises when specifying conjunctive or disjunctive types.

RuleSec
isa RULE SEC
[394]
Secondary relation pattern (long: "["PRIM"]"). A secondary relation name is formed by enclosing a primary relation name in square brackets.
Related types: SEC.
Chapter 10

Ontological relations: ONTO

ONTO: ontology level
    ONTOCLASS: ontological class
        _top: ontological entity
          _abstract: abstract entity
          _concrete: concrete entity

Figure 10.1: The relations matching ONTO-!CDT1-TOPIC.

ONTO
isa DIM:LEVEL
[13]

Ontology level (long: ONTOLOGY). The ontological level includes relations between lexical elements construed as ontological units, as well as lexical features associated with ontological units.

Subtypes: ONTOCLASS.

ONTOCLASS
isa FEAT ONTO
[485]

Ontological class. A class in the ontology. The ontology encodes a classification of all lexical elements with respect to their natural kind.

Subtypes: _top.

_top
isa ONTOCLASS
[486]

Ontological entity.

Subtypes: _abstract _concrete.

_abstract
isa _top
[487]

Abstract entity.

_concrete
isa _top
[488]

Concrete entity.

Appendix B

Agreement and confusion tables

In the following tables, the columns are interpreted as follows:

- *Relation name R:* the name of the relation.

- *Full labeled agreement A:* the probability that another annotator assigns the same label and out-node to the relation.

- *Unlabeled agreement A_U:* the probability that another annotator assigns the same out-node (but not necessarily label) to the relation.

- *Label agreement A_L:* the probability that another annotator assigns the same label (but not necessarily out-node) to the relation.

- *Relation count N:* the number of distinct multiply annotated tokens in the corpus that were annotated with the relation by at least one annotator.

- *Confusion table:* the relations that other annotators used, with a percentage that indicates the probability that each relation was used by the other annotator instead of R.

Agreement is computed differently for morphology than for the other linguistic levels (by comparing label sequences), and the scores for morphology are therefore used differently: in particular, $A = A_L$ always denotes the probability that the other annotator selects the same label in the sequence of labels (but no claim about outnode), and $A_U = 100\%$ always because out-nodes cannot be compared.
